

NCIE-016 Skeletal v0.1 → Full v1.0

Full-Expansion Change Register

Testing, Verification & Acceptance Specification — IN DEVELOPMENT / FOR HUMAN REVIEW

Formal-Title Reconciliation (Directive Item 3)

The Skeletal v0.1 working title 'NCIE-016 — Testing, Quality Assurance & Verification Specification' was checked against the NCIE Documentation Suite Master Controlled Register v2.0, Section 3, NCIE-016 entry, per directive item 3 and the skeleton's own Title-control note. The register records the formal title as 'Testing, Verification & Acceptance Specification' with Primary Purpose 'Verification strategy, test suites, security/AI/data testing and acceptance gates' — matching this document's actual 40-chapter scope exactly. Comparison result: SEMANTIC MATCH — DOCUMENT-CONTROL WORDING DIFFERS ('Quality Assurance' dropped, 'Acceptance' added; no material scope discrepancy). The document-control title was accordingly set to 'NCIE-016 — Testing, Verification & Acceptance Specification' throughout this document and the deliverable filename; this is recorded as Human Review item HR16-1-1 for institutional confirmation.

Maps each of the 40 approved NCIE-016 Skeletal v0.1 chapters to its expanded v1.0 location, states the authority basis for the expansion, and records the effect on that chapter's Human Review Focus item. No chapter was added, removed, merged, split or renumbered; every approved chapter purpose, Salient Things to Note, principal component, upstream dependency and Human Review focus is substantively represented below, including an explicit Salient Things to Note subsection in all 40 chapters (directive item 86 hard gate). No test described in the expanded specification was executed, passed, validated or accepted in the course of this production run.

Table 4 (Chapter 2) — Test-State Matrix, fixing seven non-substitutable verification states. Table 7 (Chapter 4) — Master RTM, whose Result column reads NOT RUN throughout at this specification stage. Human Review Register Reconciliation

40 Human Review items total: 38 items from Chapters 1-38 (one per chapter, mechanically extracted from each chapter's own Human Review Focus bullet text), plus HR16-39-1 (Chapter 39's own item) and HR16-40-1 (Chapter 40's own item) — both defined once and included in the register from the start, per the lessons learned from the NCIE-008 v1.0 correction (register-reconciliation omission) and the NCIE-009 v1.0 correction (Salient Things to Note omission), rather than discovered afterward. Classification breakdown: 27 Institutional Confirmation Required, 6 Security/Sovereignty Confirmation

Required, 5 Engineering/Infrastructure Discovery Required, 1 Legal/Policy Confirmation Required, 1 Resolved by Upstream Baseline. 38 Blocking / 2 Non-Blocking. Every NCIE-016 item was individually checked against the existing NCIE-008–015 Human Review registers per directive item 70's upstream-deduplication rule; none was found to restate an identical authority/threshold/environment/security/UX/operations question, so no cross-reference deduplication was required for this edition. No item manufactures closure of a decision the approved skeleton, the approved NCIE-008–015 layers, or the approved upstream chain does not itself settle.

Skeleton Fidelity Statement

Every approved Chapter Purpose, Salient Things to Note, Principal Component, Upstream Dependency/Authority and Human Review Focus from the approved NCIE-016 Skeletal v0.1 is substantively represented in the corresponding v1.0 chapter above, including an explicit Salient Things to Note subsection in all 40 chapters — independently re-verified against the final assembled document by a programmatic scan (directive item 86), not assumed from the build script; none is omitted and none is conceptually inverted (Chapter 40 §40.3).
