

NCIE-012

UX/UI & Design System Specification

**In development — for human review of full expansion —
Version 1.0**

Specifies detailed UX/UI, workspace/panel composition, ARGUS presentation, interaction-state representation, accessibility and Design System rules beneath the approved NCIE-001–011 foundation: information architecture, responsive layout, design tokens, component library, data tables/visual analytics, ARGUS/Agent/VPF/governance presentation, security and Evidence UX, async/error states, forms, case/collaboration UX, personalization, accessibility, localization, performance, analytics, design-system governance, prototyping and UX testing.

Presentation-only, upstream-consuming: NCIE-012 owns presentation/interaction design; it does not redefine canonical data, ARGUS behavior, Memory/Context, Agent/VPF semantics, governance, IAM/security, Evidence/provenance, API contracts or domain business logic.

Expands approved NCIE-012 Skeletal v0.1, itself traced to approved NCIE-001 v1.3 through approved NCIE-011 v1.0.

Prepared: 15 September 2026

Maintained by: National Communications Intelligence Ecosystem (NCIE)

Document Governance

0.1 Authority Chain

NCIE-001 requirements → NCIE-002 architecture → NCIE-003 canonical data → NCIE-004 engineering baseline → NCIE-005 ARGUS behavioral authority → NCIE-006 Memory & Context architecture → NCIE-007 AI/Agent/Model Orchestration → NCIE-008 Governance, Authority, Accountability & RACI → NCIE-009 Security, IAM & Zero-Trust Architecture → NCIE-010 Evidence, Provenance & Audit Architecture → NCIE-011 API, Integration & Data Connector Specification → NCIE-012 UX/UI & Design System Specification. NCIE-012 renders the states and interfaces every upstream document already defines; it creates no canonical meaning, institutional authority, security control, Evidence semantics or API contract of its own.

0.2 Token-Conservation Convention

Every chapter opens with a short Upstream block citing the specific upstream NCIE-001–011 authority the chapter renders, stating only the presentation relationship rather than restating upstream technical, governance, security, Evidence or integration content.

0.3 Governing UX/UI Invariants Register

These 19 invariants bind every chapter of this document and are stated once here rather than re-derived repeatedly. They are fixed by the approved NCIE-012 Skeletal v0.1 and by the approved NCIE-001–011 authority chain; no institutional decision is required to adopt them. The 12 NCIE-008 governance invariants, the 16 NCIE-009 security invariants, the 19 NCIE-010 Evidence/provenance/audit invariants, the 20 NCIE-011 integration invariants, and other upstream invariants already binding from NCIE-005/006/007 remain fully in force and are cross-referenced, not restated, in the chapters below.

- VISIBLE ≠ AUTHORIZED.
- HIDDEN ≠ SECURE.
- DISABLED CONTROL ≠ AUTHORIZATION ENFORCEMENT.
- UI STATE ≠ AUTHORITATIVE SYSTEM STATE.
- DISPLAYED SUCCESS ≠ VERIFIED BUSINESS SUCCESS.
- REQUEST ACCEPTED ≠ ACTION COMPLETED.
- WARNING DISMISSED ≠ RISK ACCEPTED.
- VPF PASS ≠ HUMAN APPROVAL.
- AGENT STATUS ≠ HUMAN AUTHORITY.
- ARGUS PRESENTATION ≠ ARGUS AUTHORITY.
- MEMORY DISPLAY ≠ CURRENT TRUTH.
- EVENT NOTIFICATION ≠ AUTHORITATIVE CURRENT STATE.
- SEARCH RESULT ≠ EVIDENCE.
- ACCESSIBILITY ≠ OPTIONAL ENHANCEMENT.
- COLOUR ≠ SOLE STATE INDICATOR.
- VOICE PRESENCE ≠ AUTHENTICATED IDENTITY.
- PERSONALIZATION ≠ AUTHORIZATION CHANGE.
- RESPONSIVE LAYOUT ≠ SEMANTIC CHANGE.
- DESIGN TOKEN ≠ BUSINESS RULE.

0.4 UX/Upstream Boundary Note

NCIE-012 owns detailed UX/UI, workspace/panel composition, ARGUS presentation, interaction-state representation, accessibility and Design System rules. It consumes NCIE-003 canonical data, NCIE-005/006/007 ARGUS/Memory/orchestration semantics, NCIE-008 institutional decision rights, NCIE-009 security/IAM controls, NCIE-010 Evidence/provenance/audit semantics and NCIE-011 API/integration contracts, without redefining any of them. Where a matter requires an institutional or design choice (a persona set, an accessibility conformance level, a supported locale) not fixed by an approved source, this document states the UX requirement and defers the choice to Human Review rather than inventing an answer. Approval of the NCIE-012 Skeletal v0.1 authorized this full

expansion only; it did not itself approve any brand choice, threshold, product choice or ownership assignment proposed below.

0.5 Human Review Focus Classification

Every chapter's Human Review Focus item carries one of seven labels: RESOLVED BY UPSTREAM BASELINE; PROPOSED DESIGN DEFAULT; INSTITUTIONAL CONFIRMATION REQUIRED; SECURITY/SOVEREIGNTY CONFIRMATION REQUIRED; LEGAL/POLICY CONFIRMATION REQUIRED; ENGINEERING/INFRASTRUCTURE DISCOVERY REQUIRED; or SOURCE/WORKFLOW DISCOVERY REQUIRED — each additionally marked Blocking or Non-Blocking, and each stating precisely what it blocks. Per directive item 66, a Chapter 36 register item that restates an identical NCIE-008/009/011 governance, security or integration question cross-references that upstream Human Review ID instead of duplicating it; a new NCIE-012 item is created only for a distinct UX/design decision. Chapter 36 consolidates every open item, extracted directly from the chapters so the register cannot drift from its sources (mechanically verified per §36.4).

0.6 Status Convention

Skeletal-structure approval authorizes expansion; it does not approve any individual brand choice, threshold, product choice or ownership assignment proposed below — those remain IN DEVELOPMENT / FOR HUMAN REVIEW until a separate approval act. Nothing in this document may be cited as an approved institutional decision, a deployed interface, an accessibility conformance claim, or a completed test.

0.7 Salient Things to Note Discipline

Directive item 79 requires this expansion to programmatically verify an explicit '<N>.0 Salient Things to Note' subsection in all 37 chapters, continuing the discipline established after the NCIE-009 Chapter-27 omission (found by independent human examination and corrected) and reinforced in the NCIE-010 and NCIE-011 builds. Every chapter below renders its Salient Things to Note subsection as an unconditional part of the same build-time helper (NCIE-012's lib.py raises a build error if a chapter's salient content is missing), and Chapter 37's mechanical audit (§37.2) re-verifies this against the final document.

0.8 Document Amendment History

Version: v0.1

Change: Approved skeletal review edition (structural/conceptual review only; full expansion not yet authorized).

Version: v1.0

Change: Full expansion of the approved NCIE-012 Skeletal v0.1 into the complete 37-chapter specification per the NCIE-012 v0.1→v1.0 Claude Full-Expansion Production Directive: UX/UI doctrine, seven consolidated matrices, misleading-success/machine-authority/security-leakage/Evidence-semantics/responsive-semantic/accessibility audits, Human Review Register (Chapter 36) and full traceability/handover (Chapter 37).

Authority: Approved NCIE-001 Master PRD v1.3 through approved NCIE-011 API, Integration & Data Connector Specification v1.0, and the approved NCIE-012 Skeletal v0.1.

Scope: Controlled full expansion only — the approved 37-chapter skeletal structure, chapter purposes and boundaries are preserved exactly; no chapter was added, removed, merged, split or renumbered.

Status: v1.0 IN DEVELOPMENT — FOR HUMAN REVIEW OF FULL EXPANSION. The approved v0.1 skeleton remains historically preserved as the expansion architecture.

Document	NCIE-012 UX/UI & Design System Specification
Edition	In development — Version 1.0 (Full Expansion of Approved Skeletal v0.1)
Requirements authority	NCIE-001 Master Product Requirements Document, Version 1.3 — APPROVED
Architecture authority	NCIE-002 System Architecture & Technical Design, Version 0.5 — APPROVED

Canonical data authority	NCIE-003 Data Model & Data Dictionary, Version 0.4 — APPROVED
Engineering baseline	NCIE-004 Technology Stack & Engineering Blueprint, Version 1.2 — APPROVED
ARGUS behavioral authority	NCIE-005 ARGUS Intelligence Assistant Specification, Version 1.3 — APPROVED
Memory & Context authority	NCIE-006 Memory & Context Architecture Specification, Version 1.2 — APPROVED
Orchestration authority	NCIE-007 AI, Agent & Model Orchestration Specification, Version 1.2 — APPROVED
Governance authority	NCIE-008 Governance, Authority, Accountability & RACI Specification, Version 1.0 — APPROVED
Security authority	NCIE-009 Security, IAM & Zero-Trust Architecture, Version 1.0 — APPROVED
Evidence/provenance/audit authority	NCIE-010 Evidence, Provenance & Audit Architecture, Version 1.0 — APPROVED
Integration authority	NCIE-011 API, Integration & Data Connector Specification, Version 1.0 — APPROVED
Prior baseline	NCIE-012 UX/UI & Design System Specification, Skeletal v0.1 — APPROVED FOR FULL EXPANSION (historically preserved)
Status	IN DEVELOPMENT — FOR HUMAN REVIEW OF FULL EXPANSION until explicitly approved; the approved v0.1 skeleton remains historically preserved as the expansion architecture

Mandate, Authority Chain & UX Boundary

Establish NCIE-012 as the detailed UX/UI and Design System owner within the approved NCIE suite.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.
Upstream: NCIE-001–011 approved foundation.

1.0 Salient Things to Note

UX renders upstream states; it cannot redefine authority, data, Evidence, ARGUS behavior, security or API semantics — Table 1 fixes this boundary so no later chapter can drift into owning what an upstream document already owns.

1.1 Mandate and Scope

NCIE-012 renders the states, data and interactions that upstream documents already define — it does not create product behavior, canonical meaning, institutional authority, security policy, Evidence semantics or API contracts.

1.2 UX Boundary — What NCIE-012 Does Not Own

NCIE-012 does not own canonical data, ARGUS behavior, Memory/Context semantics, Agent/VPF semantics, institutional governance, security enforcement, Evidence/provenance meaning, API contracts or domain business logic. It owns the presentation and interaction layer above all of them.

Table 1. NCIE-012 UX boundary.

Concern	Owned By
Product requirements/scope	NCIE-001
System architecture	NCIE-002
Canonical data model	NCIE-003
Engineering baseline	NCIE-004
ARGUS behavioral authority	NCIE-005
Memory & Context architecture	NCIE-006
AI/Agent/Model orchestration	NCIE-007
Institutional governance, RACI	NCIE-008
Security, IAM, Zero-Trust enforcement	NCIE-009
Evidence lifecycle, provenance, audit	NCIE-010
API/event/connector/integration contracts	NCIE-011
Detailed UX/UI, presentation, interaction, Design System	NCIE-012 (this document)
Domain business logic, deployment/operations, detailed testing	NCIE-013/015/016 (downstream)

1.3 Handovers

Every consequential representation in this document is expressed as a rendering of an upstream state — an NCIE-008 decision, an NCIE-009 security state, an NCIE-010 Evidence record, an NCIE-011 API/event response — never as a new state invented here.

1.R RACI / Control Ownership

Table 2. Chapter 1 RACI / control ownership.

Function	Accountable (NCIE-	Responsible (UX)	Consulted	Informed
----------	--------------------	------------------	-----------	----------

	008)			
Adopt/confirm NCIE-012 UX architecture	Accountable Authority Class (NCIE-008, to be assigned)	UX Architecture Owner (to be assigned)	NCIE- 008/009/010/011 chapter owners	All institutional role holders

Human Review Focus

- [INSTITUTIONAL CONFIRMATION REQUIRED] (Blocking) HR12-1-1: Confirm NCIE-012 acceptance/sign-off authority.

Traceability: NCIE-001–011 approved foundation.

Human-Centred UX Doctrine & Interaction Principles

Define Human-Primary interaction doctrine governing every screen this document specifies.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.

Upstream: NCIE-001; NCIE-005; NCIE-008.

2.0 Salient Things to Note

Interfaces must preserve comprehension, control, review and accountability without implying machine authority — Table 3 operationalizes this into a concrete permitted-versus-prohibited mapping for every major upstream state class, so later chapters apply a fixed rule rather than reinventing one.

2.1 Interaction Principles

Every interface preserves comprehension, control, review and accountability without implying machine authority. Clarity, consistency, progressive disclosure, reversibility, explainability, graceful interruption, bounded cognitive load and safe defaults are the governing design principles for every chapter that follows.

2.2 No Machine Authority Through Presentation

No visual treatment — however confident, complete or polished — may imply that a machine state (a Gate pass, a VPF disposition, an Agent status, an ARGUS presentation mode) itself constitutes institutional authority. This principle is restated, not re-derived, in every chapter whose subject matter touches a machine state.

2.3 UX State Matrix (directive item 58)

The consolidated matrix below maps authoritative upstream state classes to permitted UX representations and explicitly prohibited misleading representations, so no later chapter needs to re-derive this mapping from scratch.

Table 3. UX State Matrix.

Upstream State Class	Permitted UX Representation	Prohibited Misleading Representation	Owni ng Chapter
Gate A / Gate B / VPF disposition	Explicit disposition label (PASS/QUALIFIED/REJECT/HUMAN_REVIEW_REQUIRED/VALIDATION_UNAVAILABLE) with distinct icon per disposition	A green check, badge or icon implying Human Approval or Evidence status	Ch.15
Agent/multi-Agent status	Agent-type badge, run state, task scope, delegation chain	A human avatar, name-style identity, or 'consensus' framed as human agreement	Ch.14
ARGUS presentation mode	Docked/Expanded/Full-Screen indicator	Full-Screen mode hiding or de-emphasizing an active governance/security banner	Ch.11

Human Approval/Review state	Explicit queue state, approver identity, conditions, receipt	A dismissed warning or acknowledged notice presented as an approval	Ch.16
Authentication/authorization state	Explicit denial/step-up/session state with reason class (not sensitive detail)	A disabled control presented as if it were the enforcement boundary itself	Ch.17 , 19
Evidence/provenance /audit state	Evidence card with source, version, custody, integrity, contradiction indicators	A search result or Memory-derived snippet presented without distinguishing it from registered Evidence	Ch.20 , 21
Async operation state	Accepted/Running/Waiting/Failed/Cancelled/Completed/Outcome-Unknown, each visually distinct	'Accepted' or 'Submitted' rendered identically to 'Completed'	Ch.23
Event/notification state	Notification with explicit urgency and evidentiary-certainty labels	A notification presented as if it were confirmed current system state or a Finding	Ch.22

2.R RACI / Control Ownership

Table 4. Chapter 2 RACI / control ownership.

Function	Accountable (NCIE-008)	Responsible (UX)	Consulted	Informed
Approve institution-specific UX principles	Accountable Authority Class (to be assigned)	UX Doctrine Owner (to be assigned)	NCIE-005/008 owners	All chapter owners

Human Review Focus

- [INSTITUTIONAL CONFIRMATION REQUIRED] (Non-Blocking) HR12-2-1: Approve any institution-specific UX principles not fixed upstream; does not block the doctrine already stated above in the interim.

Traceability: NCIE-001; NCIE-005; NCIE-008.

User Roles, Personas & Workspace Needs

Translate approved role classes into UX needs without changing authorization or inventing new governance roles.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.

Upstream: NCIE-002 proposed panels; NCIE-008 roles; NCIE-009 IAM.

3.0 Salient Things to Note

Persona/layout differences change presentation, not authorization; representative-user validation is required — Table 5's authorization note is repeated for every persona precisely so no panel default can be misread as an access grant.

3.1 Persona Set

Eight representative personas are addressed: Executive, Analyst, Engineer, Regulator/Case Officer, Investigator, Administrator, Auditor, and a general task-needs category for roles not yet named. Persona and layout differences change presentation, not authorization — a persona's default panels are a UX convenience, never an access grant.

3.2 Representative-User Validation

Each persona's UX needs are validated with representative users before acceptance (Chapter 34); the final persona set and representative-user groups are a Human Review decision.

3.3 Role/Workspace Matrix (directive item 59)

The matrix below maps persona classes to default UX needs and panels while stating explicitly that layout visibility is not authorization.

Table 5. Role/Workspace Matrix.

Persona Class	Primary UX Needs	Default Panel Emphasis	Authorization Note
Executive	High-level situation awareness, KPI/visual analytics, minimal operational detail	Dashboards, situation cards, summary views	Panel emphasis is a UX default; underlying data access is governed by NCIE-009, not by this layout
Analyst	Deep investigative tools, Evidence/provenance detail, data tables	Case/investigation workspace, Evidence panels, analytical tables	Same authorization note as above
Engineer	System/connector health, error/observability detail	Observability and connector-health panels	Same authorization note as above
Regulator/Case Officer	Governed submission/retrieval, case status, acknowledgements	Operator-facing case panels	Same authorization note as above
Investigator	Case timelines, tasks, Evidence, collaboration	Case/workflow workspace	Same authorization note as above
Administrator	Configuration, user/role administration surfaces (content excluded by default per NCIE-009 admin/content separation)	Admin console panels	Administrative panel visibility never implies content-access authority (NCIE-009 Ch.8)
Auditor	Audit/provenance review, governance-decision	Audit/compliance panels	Same authorization note

history

as above

3.R RACI / Control Ownership

Table 6. Chapter 3 RACI / control ownership.

Function	Accountable (NCIE-008)	Responsible (UX)	Consulted	Informed
Approve persona set/representative-user groups	Accountable Authority Class (to be assigned)	Persona/Workspace Owner (to be assigned)	NCIE-008 role-taxonomy owner	Assurance/Audit (NCIE-008)

Human Review Focus

- [INSTITUTIONAL CONFIRMATION REQUIRED] (Blocking) HR12-3-1: Confirm the persona set and representative-user groups.

Traceability: NCIE-002 proposed panels; NCIE-008 roles; NCIE-009 IAM.

Information Architecture & Navigation

Define platform information architecture and navigation.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.

Upstream: NCIE-001 Command Center; NCIE-011 routes; NCIE-009 authorization.

4.0 Salient Things to Note

Navigation visibility is not access control; search/deep links remain authorization-bound — this chapter never treats a visible menu entry as evidence that its destination is accessible.

4.1 Navigation Visibility Is Not Access Control

Global navigation, hierarchy, breadcrumbs, deep links, recents/favorites and Context switching present a map of the platform; every destination they lead to remains bound by NCIE-009 current-authorization checks. Seeing a navigation entry never implies the ability to act on it.

4.2 Search Entry and Deep Links

Search entry points and deep links resolve through the same authorization-bound Evidence/object retrieval as any other access path (NCIE-011 Ch.4-5) — a link is a shortcut to a request, not a bypass of one.

4.R RACI / Control Ownership

Table 7. Chapter 4 RACI / control ownership.

Function	Accountable (NCIE-008)	Responsible (UX)	Consulted	Informed
Approve top-level navigation/terminology	Accountable Authority Class (to be assigned)	Information Architecture Owner (to be assigned)	Reviewer	Assurance/Audit (NCIE-008)

Human Review Focus

- [INSTITUTIONAL CONFIRMATION REQUIRED] (Blocking) HR12-4-1: Approve top-level navigation and terminology.

Traceability: NCIE-001 Command Center; NCIE-011 routes; NCIE-009 authorization.

Workspace Shell & Panel Composition

Define standard workspace shell and role/task panel compositions.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.

Upstream: NCIE-002 proposed role panels; NCIE-004 UI engineering.

5.0 Salient Things to Note

Panel composition is a UX default, not entitlement; layout changes never change authority — this chapter's saved-layout model carries no permission of its own, only a presentation preference.

5.1 Composition Is a Default, Not an Entitlement

Header, workspace, contextual panels, sidebars, status areas, docking/resizing and saved layouts are UX conveniences — changing a layout never changes what a user is authorized to do or see, and a saved layout carries no access grant of its own.

5.2 Default Role Layouts

Default panel compositions per persona (Chapter 3) are Human Review decisions, informed by representative-user validation (Chapter 34).

5.R RACI / Control Ownership

Table 8. Chapter 5 RACI / control ownership.

Function	Accountable (NCIE-008)	Responsible (UX)	Consulted	Informed
Approve default role layouts	Accountable Authority Class (to be assigned)	Workspace Shell Owner (to be assigned)	Persona/Workspace Owner (Ch.3)	Assurance/Audit (NCIE-008)

Human Review Focus

- [INSTITUTIONAL CONFIRMATION REQUIRED] (Non-Blocking) HR12-5-1: Confirm default role layouts; does not block the composition primitives already defined in the interim.

Traceability: NCIE-002 proposed role panels; NCIE-004 UI engineering.

Responsive Layout & Viewport Adaptation

Define responsive behavior across supported form factors.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.

Upstream: NCIE-004 frontend; NCIE-002 NFRs.

6.0 Salient Things to Note

RESPONSIVE LAYOUT ≠ SEMANTIC CHANGE; critical governance/security states must survive reflow — this chapter requires every such state to be re-verified present, not merely visually repositioned, at every supported breakpoint.

6.1 Responsive Layout Is Not Semantic Change

RESPONSIVE LAYOUT ≠ SEMANTIC CHANGE. Reflow, stacking, density adjustment, overflow handling, touch-target sizing and content-priority reordering change how information is arranged, never what it means — critical governance/security states must survive reflow unchanged.

6.2 Supported Form Factors

Which form factors (desktop, tablet, mobile, compact/dense modes) are supported, and any viewport minima, are Human Review decisions; no breakpoint is invented here.

6.R RACI / Control Ownership

Table 9. Chapter 6 RACI / control ownership.

Function	Accountable (NCIE-008)	Responsible (UX)	Consulted	Informed
Approve supported form factors/viewport minima	Accountable Authority Class (to be assigned)	Responsive Layout Owner (to be assigned)	NCIE-004 frontend owner	Assurance/Audit (NCIE-008)

Human Review Focus

- [ENGINEERING/INFRASTRUCTURE DISCOVERY REQUIRED] (Blocking) HR12-6-1: Confirm supported form factors.

Traceability: NCIE-004 frontend; NCIE-002 NFRs.

Design System Foundations

Define reusable visual/interaction foundations without inventing brand choices.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.

Upstream: NCIE-004 frontend baseline.

7.0 Salient Things to Note

Design tokens standardize presentation; they do not encode business rules — this chapter's token taxonomy is deliberately brand-agnostic so approving a visual identity later requires no architectural change.

7.1 Tokens Standardize Presentation, Not Business Rules

DESIGN TOKEN ≠ BUSINESS RULE. Typography roles, spacing, sizing, iconography, colour roles, motion, borders, density and state tokens standardize how the interface looks and feels; none of them encodes an authorization rule, a classification level or a business decision.

7.2 Brand Inputs Deferred

No logo, brand palette, typography family, icon brand or imagery style is invented here — brand/visual identity inputs are approved separately (Human Review), and the token system is designed to accept whatever is approved without redesign.

7.R RACI / Control Ownership

Table 10. Chapter 7 RACI / control ownership.

Function	Accountable (NCIE-008)	Responsible (UX)	Consulted	Informed
Approve brand/visual identity inputs	Accountable Authority Class (to be assigned)	Design System Owner (to be assigned)	NCIE-004 frontend owner	Assurance/Audit (NCIE-008)

Human Review Focus

- [PROPOSED DESIGN DEFAULT] (Blocking) HR12-7-1: Approve brand/visual identity inputs (logo, palette, typography family, icon brand, imagery style).

Traceability: NCIE-004 frontend baseline.

Component Library & Composition Rules

Define reusable components and composition/accessibility rules.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.
Upstream: NCIE-004; NCIE-011 interface states.

8.0 Salient Things to Note

Components expose semantic/accessibility states; component availability does not imply permission — every component in this chapter's library is designed to render a denied or disabled state explicitly rather than silently hide.

8.1 Availability Is Not Permission

Inputs, buttons, tables, cards, tabs, dialogs, menus, badges, alerts, progress and empty-state components each expose their semantic and accessibility state explicitly; a component being available or enabled in the library never implies the current user is permitted to use it (DISABLED CONTROL ≠ AUTHORIZATION ENFORCEMENT applies symmetrically — an enabled control is not proof of authorization either).

8.2 Component Governance

Component contribution, review and versioning follow the Design System governance process (Chapter 33); component-specific governance details are a Human Review decision.

8.R RACI / Control Ownership

Table 11. Chapter 8 RACI / control ownership.

Function	Accountable (NCIE-008)	Responsible (UX)	Consulted	Informed
Approve component governance model	Accountable Authority Class (to be assigned)	Component Library Owner (to be assigned)	Design System Owner (Ch.33)	Assurance/Audit (NCIE-008)

Human Review Focus

- [INSTITUTIONAL CONFIRMATION REQUIRED] (Non-Blocking) HR12-8-1: Confirm component governance; does not block the component semantic/accessibility requirements already defined in the interim.

Traceability: NCIE-004; NCIE-011 interface states.

NCIE-012 — Chapter 9 Expansion

Data Tables, Grids & Analytical Views

Define high-density data UX for analytical work.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.
Upstream: NCIE-003; NCIE-009; NCIE-010.

9.0 Salient Things to Note

Sorting/filtering/aggregation must not silently alter evidentiary meaning; protected fields remain governed — this chapter's table interactions are presentation-only operations that never touch the underlying record or its classification.

9.1 Interaction Does Not Alter Evidentiary Meaning

Sorting, filtering, grouping, pagination and virtualization change how rows are presented; they must never silently alter the underlying Evidence/record's meaning, omit a contradicting row without indication, or imply a filtered view is the complete record.

9.2 Protected Fields Remain Governed

Export affordances and protected-field presentation (masking, redaction) follow NCIE-009 classification and NCIE-010 provenance rules exactly; a column being sortable or exportable never overrides a masking rule. Density and export defaults are Human Review decisions.

9.R RACI / Control Ownership

Table 12. Chapter 9 RACI / control ownership.

Function	Accountable (NCIE-008)	Responsible (UX)	Consulted	Informed
Approve density/export defaults	Accountable Authority Class (to be assigned)	Data Table/Grid Owner (to be assigned)	NCIE-009 DLP owner	Assurance/Audit (NCIE-008)

Human Review Focus

- [ENGINEERING/INFRASTRUCTURE DISCOVERY REQUIRED] (Blocking) HR12-9-1: Confirm density/export defaults.
- Traceability: NCIE-003; NCIE-009; NCIE-010.

NCIE-012 — Chapter 10 Expansion

Charts, Maps & Visual Analytics

Define visual analytics patterns for charts, maps and related views.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.

Upstream: NCIE-001/002; NCIE-003 GIS/KPI; NCIE-010.

10.0 Salient Things to Note

Visuals preserve uncertainty, scale and provenance; correlation must not be presented as causality — this chapter requires every chart/map to retain its uncertainty and provenance indicators through drill-down, not only at the initial view.

10.1 Preserve Uncertainty, Scale and Provenance

Every chart or map preserves its scale, any known uncertainty, and a provenance reference to its underlying Evidence/data; annotations and drill-down do not strip these away as the user zooms or filters.

10.2 Correlation Is Not Causality

Linked selection and correlated visual patterns are never presented as causal proof — this is the same LINEAGE ≠ CAUSALITY discipline NCIE-010 Ch.18 already fixes, applied here to visual presentation specifically. Visualization conventions are a Human Review decision.

10.R RACI / Control Ownership

Table 13. Chapter 10 RACI / control ownership.

Function	Accountable (NCIE-008)	Responsible (UX)	Consulted	Informed
Approve visualization conventions	Accountable Authority Class (to be assigned)	Visual Analytics Owner (to be assigned)	NCIE-010 provenance owner	Assurance/Audit (NCIE-008)

Human Review Focus

- [INSTITUTIONAL CONFIRMATION REQUIRED] (Blocking) HR12-10-1: Approve visualization conventions.

Traceability: NCIE-001/002; NCIE-003 GIS/KPI; NCIE-010.

ARGUS Presentation Modes

Define Docked, Expanded and Full-Screen ARGUS UX.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.

Upstream: NCIE-002 proposed ARGUS state; NCIE-005.

11.0 Salient Things to Note

Presentation changes space/focus, not authority; Full-Screen must not conceal critical governance/security state — this chapter requires every critical banner to be verified present in Full-Screen mode specifically, not assumed to carry over.

11.1 Presentation Changes Space, Not Authority

ARGUS PRESENTATION ≠ ARGUS AUTHORITY. Docked, Expanded and Full-Screen modes change how much screen space ARGUS occupies and how focus is allocated — none of them changes what ARGUS is authorized to do or represents ARGUS as an institutional decision-maker.

11.2 Full-Screen Must Not Conceal Critical State

Full-Screen mode must not conceal an active governance or security banner (e.g., an emergency/break-glass indicator, a Human Review pending state) — critical state persists across every presentation mode and transition. The default ARGUS mode is a Human Review decision.

11.R RACI / Control Ownership

Table 14. Chapter 11 RACI / control ownership.

Function	Accountable (NCIE-008)	Responsible (UX)	Consulted	Informed
Approve default ARGUS presentation mode	Accountable Authority Class (to be assigned)	ARGUS Presentation Owner (to be assigned)	NCIE-005 behavioral owner	Assurance/Audit (NCIE-008)

Human Review Focus

- [INSTITUTIONAL CONFIRMATION REQUIRED] (Non-Blocking) HR12-11-1: Confirm default ARGUS mode; does not block the three presentation modes already defined in the interim.

Traceability: NCIE-002 proposed ARGUS state; NCIE-005.

Conversational Interaction & Response Structure

Define detailed ARGUS conversation UI structure.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.

Upstream: NCIE-005; NCIE-006; NCIE-010.

12.0 Salient Things to Note

Distinguish Evidence, Memory, AI analysis, Agent output, assumptions, uncertainty and Human decisions — this chapter's message structure gives each content class its own required visual treatment so none can be collapsed into an undifferentiated block of text.

12.1 Distinguish Every Content Class

Every conversational response distinguishes Evidence, Memory-derived content, AI analysis, Agent output, stated assumptions, uncertainty, contradictions/gaps, citations/provenance and Human decisions from one another — none is rendered in a way that lets one be mistaken for another.

12.2 Information Density and Disclosure

Citations and provenance are available at a consistent disclosure level (e.g., inline reference plus expandable detail); the specific information density and disclosure default is a Human Review decision.

12.R RACI / Control Ownership

Table 15. Chapter 12 RACI / control ownership.

Function	Accountable (NCIE-008)	Responsible (UX)	Consulted	Informed
Approve information density/disclosure defaults	Accountable Authority Class (to be assigned)	Conversational UX Owner (to be assigned)	NCIE-005 behavioral owner	Assurance/Audit (NCIE-008)

Human Review Focus

- [INSTITUTIONAL CONFIRMATION REQUIRED] (Non-Blocking) HR12-12-1: Confirm information density/disclosure defaults; does not block the content-class distinctions already defined in the interim.

Traceability: NCIE-005; NCIE-006; NCIE-010.

NCIE-012 — Chapter 13 Expansion

Voice, Speech & Multimodal Interaction

Define voice/transcription/multimodal UX.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.

Upstream: NCIE-005 voice; NCIE-009 security.

13.0 Salient Things to Note

VOICE PRESENCE ≠ AUTHENTICATED IDENTITY; spoken disclosure may require stricter privacy controls — this chapter never treats an active voice session as proof of the speaker's authenticated identity.

13.1 Voice Presence Is Not Identity

VOICE PRESENCE ≠ AUTHENTICATED IDENTITY. Invocation, listening/speaking states, mute, interrupt, captions and transcript never substitute for an authenticated session — voice interaction rides on top of the same NCIE-009 authentication state as any other modality.

13.2 Privacy Indicators and Modality Switching

Spoken disclosure may require stricter privacy controls than text (e.g., in a shared physical space); privacy indicators and modality-switch affordances make the current listening/recording state unmistakable. Voice defaults and supported environments are a Human Review decision.

13.R RACI / Control Ownership

Table 16. Chapter 13 RACI / control ownership.

Function	Accountable (NCIE-008)	Responsible (UX)	Consulted	Informed
Approve voice defaults/supported environments	Accountable Authority Class (to be assigned)	Voice/Multimodal UX Owner (to be assigned)	NCIE-005 voice owner, NCIE-009 security owner	Assurance/Audit (NCIE-008)

Human Review Focus

- [SECURITY/SOVEREIGNTY CONFIRMATION REQUIRED] (Blocking) HR12-13-1: Confirm voice defaults/environments.

Traceability: NCIE-005 voice; NCIE-009 security.

Agent & Multi-Agent Status Presentation

Define Agent and multi-Agent representation.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.

Upstream: NCIE-007; NCIE-003 Agent objects.

14.0 Salient Things to Note

Agents must not appear human or authoritative; multi-Agent consensus ≠ Human consensus — this chapter’s visual language is deliberately distinct from any human-participant treatment used elsewhere in the platform.

14.1 Agents Must Not Appear Human or Authoritative

AGENT STATUS ≠ HUMAN AUTHORITY. Agent type, run state, task scope, delegation chain and provenance are presented with unambiguously non-human visual treatment — no avatar, name style or tone that could be mistaken for a human participant or an institutional authority.

14.2 Disagreement Is Not Consensus

Multi-Agent disagreement is presented as disagreement, not resolved into an apparent consensus (AGENT CONSENSUS ≠ INSTITUTIONAL TRUTH, inherited from NCIE-007/008). The level of Agent detail shown by user class is a Human Review decision.

14.R RACI / Control Ownership

Table 17. Chapter 14 RACI / control ownership.

Function	Accountable (NCIE-008)	Responsible (UX)	Consulted	Informed
Approve Agent detail level by user class	Accountable Authority Class (to be assigned)	Agent Presentation Owner (to be assigned)	NCIE-007 Agent Factory owner	Assurance/Audit (NCIE-008)

Human Review Focus

- [INSTITUTIONAL CONFIRMATION REQUIRED] (Non-Blocking) HR12-14-1: Confirm Agent detail by user class; does not block the non-human presentation baseline already defined in the interim.

Traceability: NCIE-007; NCIE-003 Agent objects.

Gate A, Gate B & VPF State Presentation

Define validation-state UX for Gate A, Gate B and all VPF dispositions.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.

Upstream: NCIE-007 Ch.21/26; NCIE-003.

15.0 Salient Things to Note

Gate/VPF PASS must not look like Human Approval; all VPF dispositions require distinct presentation — Table 18 fixes five visually distinct VPF treatments and explicitly excludes any approval-style icon from all of them.

15.1 PASS Must Never Look Like Approval

VPF PASS ≠ HUMAN APPROVAL. Every VPF disposition (PASS, QUALIFIED, REJECT, HUMAN_REVIEW_REQUIRED, VALIDATION_UNAVAILABLE) has its own distinct label, icon and colour treatment — none uses an approval-style visual (e.g., a checkmark commonly associated with human sign-off) for a machine disposition.

15.2 Validation History and Escalation

Validation history remains available (linking to NCIE-010 audit records) and an explanation/escalation path is offered for HUMAN_REVIEW_REQUIRED and REJECT dispositions. Labels/icons for each validation state are a Human Review decision.

15.3 ARGUS/Agent/VPF Presentation Matrix (directive item 60)

The consolidated matrix below fixes distinct visual/interaction treatment and a Human-Primary caution for every ARGUS mode, Agent state and VPF disposition, cross-referencing Chapters 11 and 14.

Table 18. ARGUS/Agent/VPF Presentation Matrix.

State Class	Value	Visual/Interaction Treatment	Human-Primary Caution
ARGUS mode (Ch.11)	Docked / Expanded / Full-Screen	Distinct chrome per mode; critical banners persist in all three	Presentation mode never changes ARGUS authority
Agent state (Ch.14)	Registered / Ephemeral / multi-Agent	Non-human avatar/typography; explicit delegation chain	Agent status is never rendered as human or institutional authority
Gate A	Pass / Fail	Distinct icon from Gate B/VPF; internal-facing by default	Gate A pass is a pre-execution technical check, never a Human Approval
Gate B	Pass / Fail	Distinct icon from Gate A/VPF	Gate B pass is a technical validation check, never a Human Approval
VPF disposition	PASS / QUALIFIED / REJECT / HUMAN_REVIEW_REQUIRED / VALIDATION_UNAVAILABLE	Five visually distinct treatments, none using an approval-style checkmark	No VPF disposition, including PASS, constitutes Human Approval or Evidence

15.R RACI / Control Ownership

Table 19. Chapter 15 RACI / control ownership.

Function	Accountable (NCIE-	Responsible (UX)	Consulted	Informed
----------	--------------------	------------------	-----------	----------

	008)			
Approve labels/icons for validation states	Accountable Authority Class (to be assigned)	VPF Presentation Owner (to be assigned)	NCIE-007 VPF architecture owner	Assurance/Audit (NCIE-008)

Human Review Focus

- [INSTITUTIONAL CONFIRMATION REQUIRED] (Blocking) HR12-15-1: Approve labels/icons for validation states.
Traceability: NCIE-007 Ch.21/26; NCIE-003.

Human Approval, Review & Governance UX

Define approval and Human Review interaction patterns.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.

Upstream: NCIE-008; NCIE-005/007.

16.0 Salient Things to Note

Approval binds target/scope/version; warning dismissal is not approval; machine states cannot self-clear Human Review — this chapter's dismiss action is wired only to the banner's visibility, never to the underlying Human Review Register entry.

16.1 Approval Binds Target, Scope and Version

Every approval interaction visibly states its target, scope and version — the same binding NCIE-008 Ch.10 requires of the underlying decision record. A review queue, evidence package, decision states (approve/reject/conditional), comments, recusal, receipt and expiry are all presented explicitly rather than implied.

16.2 Dismissal Is Not Approval

WARNING DISMISSED ≠ RISK ACCEPTED. Dismissing a warning banner closes the banner; it does not record risk acceptance, and no machine state can self-clear a Human Review item through the UI. Approval/review interaction patterns are a Human Review decision at the detail level.

16.R RACI / Control Ownership

Table 20. Chapter 16 RACI / control ownership.

Function	Accountable (NCIE-008)	Responsible (UX)	Consulted	Informed
Approve approval/review interaction patterns	Accountable Authority Class (to be assigned)	Governance UX Owner (to be assigned)	NCIE-008 Ch.9/10 owner	Assurance/Audit (NCIE-008)

Human Review Focus

- [INSTITUTIONAL CONFIRMATION REQUIRED] (Blocking) HR12-16-1: Confirm approval/review interaction patterns.

Traceability: NCIE-008; NCIE-005/007.

Security, Authentication & Step-Up UX

Define authentication, reauthentication and step-up security UX.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.

Upstream: NCIE-009 Ch.5 and handover.

17.0 Salient Things to Note

Disabled UI is not enforcement; explain blocks/step-up without leaking sensitive policy — Table 21 fixes a policy-leakage constraint for every security state so the explanation shown never becomes an attacker's roadmap.

17.1 Disabled Is Not Enforcement

DISABLED CONTROL ≠ AUTHORIZATION ENFORCEMENT. A greyed-out button is a UX hint, not the security boundary — the actual enforcement is the NCIE-009 server-side check; the UI must never rely on disabling alone to prevent an unauthorized action.

17.2 Explaining Blocks Without Leaking Policy

Sign-in, session, reauthentication, step-up, denial, revocation and recovery states are explained to the user without leaking sensitive security policy (e.g., exact rules that would help an attacker). Step-up/recovery presentation details are a Human Review decision.

17.3 Security-State Matrix (directive item 61)

The matrix below maps security states to UX behavior across Chapters 17-19 without exposing sensitive policy.

Table 21. Security-State Matrix.

Security State	UX Behavior	Policy-Leakage Constraint
Authenticated (baseline)	Normal interface access per current authorization	N/A
Step-up required	Explicit step-up prompt naming the action requiring it	Does not reveal the specific assurance-level threshold that triggered it
Denied (authorization)	Generic denial message with a request-access affordance where applicable	Does not reveal why access was denied or what would grant it
Session expired/revoked	Explicit re-authentication prompt	Does not reveal whether revocation was routine or security-triggered
Privileged/elevated (Ch.18)	Distinct chrome (e.g., banner) for the duration of elevation	Does not reveal other users' privileged sessions
Break-glass/emergency (Ch.18)	Unmistakable emergency banner, non-dismissable without exit action	Does not reveal unrelated incident detail
Restricted/redacted (Ch.19)	Masked/redacted presentation, no existence-count leakage	Does not reveal object existence through counts, labels or layout artifacts

17.R RACI / Control Ownership

Table 22. Chapter 17 RACI / control ownership.

Function	Accountable (NCIE-008)	Responsible (UX)	Consulted	Informed
----------	------------------------	------------------	-----------	----------

Approve step-up/recovery presentation	Accountable Authority Class (to be assigned)	Security UX Owner (to be assigned)	NCIE-009 IAM owner	Assurance/Audit (NCIE-008)
---------------------------------------	--	------------------------------------	--------------------	----------------------------

Human Review Focus

- [SECURITY/SOVEREIGNTY CONFIRMATION REQUIRED] (Blocking) HR12-17-1: Confirm step-up/recovery presentation.

Traceability: NCIE-009 Ch.5 and handover.

Privileged & Break-Glass UX

Define privileged elevation and emergency (break-glass) UX.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.

Upstream: NCIE-009 Ch.8-9; NCIE-008.

18.0 Salient Things to Note

BREAK-GLASS ≠ PERMANENT PRIVILEGE; emergency mode must be unmistakable, scoped and temporary — this chapter's emergency banner is non-dismissable and carries a visible expiry so it can never be mistaken for a permanent state.

18.1 Emergency State Must Be Unmistakable

BREAK-GLASS ≠ PERMANENT PRIVILEGE. Elevation carries a stated rationale and warning before activation; once active, an emergency banner is unmistakable, cannot be dismissed without an explicit exit action, and shows a visible expiry countdown where applicable.

18.2 Receipt and Post-Review

Every break-glass session produces a receipt and is subject to post-event review (NCIE-009 Ch.9) — the UX surfaces both, so the acting user and reviewers can see the same record. Break-glass confirmation wording is a Human Review decision.

18.R RACI / Control Ownership

Table 23. Chapter 18 RACI / control ownership.

Function	Accountable (NCIE-008)	Responsible (UX)	Consulted	Informed
Approve break-glass confirmation wording	Emergency Authority (NCIE-008, to be assigned)	Privileged/Break-Glass UX Owner (to be assigned)	NCIE-009 emergency-authority owner	Assurance/Audit (NCIE-008)

Human Review Focus

- [SECURITY/SOVEREIGNTY CONFIRMATION REQUIRED] (Blocking) HR12-18-1: Confirm break-glass confirmations.

Traceability: NCIE-009 Ch.8-9; NCIE-008.

Authorization, Restricted & Redacted States

Define denied, partial, masked and redacted UX states.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.

Upstream: NCIE-009; NCIE-003.

19.0 Salient Things to Note

HIDDEN ≠ SECURE; UI must not leak protected content through counts, labels or layout artifacts — this chapter requires every masked/restricted surface to be checked for count- and layout-based leakage, not only for the obvious content leak.

19.1 Hidden Is Not Secure

HIDDEN ≠ SECURE. Removing an item from view is a UX convenience, not a security control — the real protection remains the NCIE-009 authorization check; a hidden or masked object must not leak its existence or content through counts, labels, tooltips or layout artifacts (e.g., a results count that changes depending on hidden matches).

19.2 Existence-Disclosure Rules

Whether the platform reveals 'a restricted item exists but you cannot view it' versus showing nothing at all is a Human Review decision, applied consistently across every surface that could otherwise leak existence inconsistently.

19.R RACI / Control Ownership

Table 24. Chapter 19 RACI / control ownership.

Function	Accountable (NCIE-008)	Responsible (UX)	Consulted	Informed
Approve existence-disclosure rules	Accountable Authority Class (to be assigned)	Restricted-State UX Owner (to be assigned)	NCIE-009 classification owner	Assurance/Audit (NCIE-008)

Human Review Focus

- [SECURITY/SOVEREIGNTY CONFIRMATION REQUIRED] (Blocking) HR12-19-1: Confirm existence-disclosure rules.

Traceability: NCIE-009; NCIE-003.

Evidence, Provenance & Audit Presentation

Define Evidence, provenance, custody and audit UX.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.
Upstream: NCIE-010; NCIE-003.

20.0 Salient Things to Note

SEARCH RESULT ≠ EVIDENCE; Evidence status/version/custody/corrections/contradictions remain visible without conflation — Table 25 fixes a prohibited-collapse rule for every Evidence/provenance state so none can be silently merged into a simpler but misleading presentation.

20.1 Search Result Is Not Evidence

SEARCH RESULT ≠ EVIDENCE. A search hit is a pointer; an Evidence card is the governed object itself, with source, provenance, custody, version, contradiction indicators and integrity status all visible without conflation — the two are never rendered identically.

20.2 Corrections and Contradictions Stay Visible

A corrected or invalidated Evidence version remains inspectable (NCIE-010 Ch.8-9); a known contradiction is shown, not hidden behind the most recent or most convenient version. Default Evidence detail level is a Human Review decision.

20.3 Evidence-State Matrix (directive item 62)

The matrix below maps Evidence/provenance states to UX treatment without semantic collapse.

Table 25. Evidence-State Matrix.

Evidence/Provenance State	UX Treatment	Prohibited Collapse
Registered Evidence	Evidence card: source, version, custody, integrity status	Never rendered identically to an unregistered search result
Search result (pre-Evidence)	Result reference with 'not yet Evidence' indicator where applicable	Never presented as if already a governed Evidence object
Corrected/superseded version	Version history with previous/current link, correction reason visible	Never silently replaced without a visible version trail
Invalidated/withdrawn	Explicit invalidated/withdrawn badge, historical record still reachable	Never deleted from the visible history
Contradiction present	Contradiction indicator surfaced alongside the Evidence, not hidden in a secondary tab by default	Never silently omitted from a summary view
Integrity mismatch (tamper indication)	Explicit tamper-indication flag, pending re-verification	Never shown as if integrity were confirmed
Custody event	Custody log entry: handler, purpose, timestamp	Never conflated with content ownership
Audit event	Audit entry distinct from provenance/telemetry views	Never merged into a single undifferentiated activity feed

20.R RACI / Control Ownership

Table 26. Chapter 20 RACI / control ownership.

Function	Accountable (NCIE-008)	Responsible (UX)	Consulted	Informed
Approve default Evidence detail level	Accountable Authority Class (to be assigned)	Evidence Presentation Owner (to be assigned)	NCIE-010 Evidence architecture owner	Assurance/Audit (NCIE-008)

Human Review Focus

- [INSTITUTIONAL CONFIRMATION REQUIRED] (Blocking) HR12-20-1: Confirm default Evidence detail.

Traceability: NCIE-010; NCIE-003.

Search, Discovery & Retrieval UX

Define governed search and discovery UX.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.

Upstream: NCIE-006; NCIE-009; NCIE-010.

21.0 Salient Things to Note

Relevance does not create authority or Evidence status; results reflect current authorization and source state — this chapter's saved searches re-authorize on every run rather than trusting a cached result set.

21.1 Relevance Does Not Create Authority

Relevance ranking does not create authority or Evidence status — a highly relevant result is still subject to current authorization and the SEARCH RESULT ≠ EVIDENCE boundary (Chapter 20). Filters, facets, result types and provenance indicators are shown consistently across result sets.

21.2 Restricted Results

Restricted results follow the Chapter 19 existence-disclosure rule consistently; saved searches re-check current authorization on every run rather than replaying a stale result set. Restricted-result behavior specifics are a Human Review decision.

21.R RACI / Control Ownership

Table 27. Chapter 21 RACI / control ownership.

Function	Accountable (NCIE-008)	Responsible (UX)	Consulted	Informed
Approve restricted-result behavior	Accountable Authority Class (to be assigned)	Search/Discovery UX Owner (to be assigned)	NCIE-009 retrieval-security owner	Assurance/Audit (NCIE-008)

Human Review Focus

- [INSTITUTIONAL CONFIRMATION REQUIRED] (Blocking) HR12-21-1: Confirm restricted-result behavior.

Traceability: NCIE-006; NCIE-009; NCIE-010.

Notifications, Alerts & Situation Awareness

Define notification, alert and Situation UX.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.

Upstream: NCIE-001/002; NCIE-005; NCIE-011 events.

22.0 Salient Things to Note

Notification ≠ authoritative current state or Finding; urgency and evidentiary certainty must remain distinct — this chapter never lets a high-urgency notification imply high evidentiary confidence, or vice versa.

22.1 Notification Is Not Authoritative State

EVENT NOTIFICATION ≠ AUTHORITATIVE CURRENT STATE. Inbox items, banners, badges and situation cards notify; they are not themselves proof of current system state or an institutional Finding — urgency and evidentiary certainty are shown as two distinct attributes, never merged into one.

22.2 Acknowledgement and Escalation

Acknowledgement, snooze, escalation and history are tracked per notification; severity/acknowledgement UX conventions are a Human Review decision.

22.R RACI / Control Ownership

Table 28. Chapter 22 RACI / control ownership.

Function	Accountable (NCIE-008)	Responsible (UX)	Consulted	Informed
Approve severity/acknowledgement UX	Accountable Authority Class (to be assigned)	Notification/Alert UX Owner (to be assigned)	NCIE-011 event owner	Assurance/Audit (NCIE-008)

Human Review Focus

- [INSTITUTIONAL CONFIRMATION REQUIRED] (Blocking) HR12-22-1: Confirm severity/acknowledgement UX.

Traceability: NCIE-001/002; NCIE-005; NCIE-011 events.

Async Operations, Progress & Outcome-Unknown UX

Define long-running operation UX.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.

Upstream: NCIE-011 Ch.23/25; NCIE-007 Tools.

23.0 Salient Things to Note

REQUEST ACCEPTED ≠ ACTION COMPLETED; timeout/submission cannot be shown as confirmed execution — Table 29 fixes a distinct label and affordance set per state so Outcome Unknown can never be displayed as either a success or a failure.

23.1 Accepted Is Not Completed

REQUEST ACCEPTED ≠ ACTION COMPLETED. A timeout or submission confirmation is never shown as confirmed execution — status, progress, cancel/retry affordances, partial results, a completion receipt, and an explicit outcome-unknown state are all distinct, visible states.

23.2 Async/Outcome Matrix (directive item 63)

The matrix below maps the NCIE-011 Chapter 23 async states to UX labels, affordances and retry/cancel rules.

Table 29. Async/Outcome Matrix.

State	UX Label	Available Affordances	Retry/Cancel Rule
Accepted	"Request accepted" with operation reference	Cancel (if supported)	No retry needed; this is not yet an outcome
Running	"In progress" with progress indicator where available	Cancel (if supported)	No retry; operation is active
Waiting	"Waiting on [dependency]" naming the class of dependency	Cancel (if supported)	No retry; caller waits or cancels
Failed	"Failed" with error-class reference (Ch.24)	Retry (if the error class is retryable)	Retry only per Ch.24 retryability rule, never a blind auto-retry
Cancelled	"Cancelled" with actor/reason where disclosable	None (terminal)	N/A
Outcome Unknown	"Outcome unknown — reconciling" — never rendered as failure or success	Reconciliation status link; no user-initiated retry until reconciled	Blind retry prohibited; must wait for reconciliation
Completed	"Completed" with result/receipt reference	View result	N/A (terminal)

23.R RACI / Control Ownership

Table 30. Chapter 23 RACI / control ownership.

Function	Accountable (NCIE-008)	Responsible (UX)	Consulted	Informed
Approve permitted user actions while	Accountable Authority Class (to	Async/Progress UX Owner (to be	NCIE-011 async-	Assurance/Audit

outcome unknown be assigned) assigned) state owner (NCIE-008)

Human Review Focus

- [INSTITUTIONAL CONFIRMATION REQUIRED] (Blocking) HR12-23-1: Confirm actions while outcome unknown.

Traceability: NCIE-011 Ch.23/25; NCIE-007 Tools.

Errors, Degraded Mode & Recovery UX

Define errors, degraded-mode and recovery UX.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.

Upstream: NCIE-005; NCIE-011; NCIE-009.

24.0 Salient Things to Note

Degraded mode must not silently relax governance/security; errors preserve semantic distinctions — this chapter's degraded-mode banner never doubles as an implicit relaxation of an authorization or classification rule.

24.1 Errors Preserve Semantic Distinctions

Validation, authentication, authorization, conflict, unavailable-dependency, timeout and internal failure each render distinctly (mirroring NCIE-011 Ch.25's error taxonomy) — none collapses into a generic error banner that loses the distinction between 'you made a mistake' and 'the system denied you' and 'something is temporarily broken.'

24.2 Degraded Mode Does Not Relax Governance

A degraded-mode banner communicates reduced capability without silently relaxing authorization, classification or governance checks — degradation reduces what is offered, never what is enforced. Diagnostic-detail exposure to end users is a Human Review decision.

24.R RACI / Control Ownership

Table 31. Chapter 24 RACI / control ownership.

Function	Accountable (NCIE-008)	Responsible (UX)	Consulted	Informed
Approve diagnostic-detail exposure	Accountable Authority Class (to be assigned)	Error/Degraded-Mode UX Owner (to be assigned)	NCIE-011 error-taxonomy owner	Assurance/Audit (NCIE-008)

Human Review Focus

- [SECURITY/SOVEREIGNTY CONFIRMATION REQUIRED] (Blocking) HR12-24-1: Confirm diagnostic-detail exposure.

Traceability: NCIE-005; NCIE-011; NCIE-009.

Forms, Data Entry & Validation

Define data-entry patterns across the platform.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.
Upstream: NCIE-003; NCIE-011; NCIE-008.

25.0 Salient Things to Note

Client validation is not authoritative server validation; defaults must not create institutional decisions — this chapter's forms always handle a server-side rejection explicitly, even after client validation passed.

25.1 Client Validation Is Not Authoritative

Client-side validation improves the entry experience; it is never treated as a substitute for server-side validation (NCIE-011 Ch.5) — a form that passes client validation can still be rejected by the server, and the UI must handle that rejection explicitly rather than assume success.

25.2 Defaults Do Not Create Decisions

Conditional fields, drafts, an autosave concept, and review-before-submit are supported without a pre-filled default ever constituting an institutional decision on the user's behalf. Consequential submissions (e.g., those that trigger a governed action) require an explicit confirmation step. Draft/autosave/confirmation specifics are a Human Review decision.

25.R RACI / Control Ownership

Table 32. Chapter 25 RACI / control ownership.

Function	Accountable (NCIE-008)	Responsible (UX)	Consulted	Informed
Approve draft/autosave/confirmation behavior	Accountable Authority Class (to be assigned)	Forms/Data-Entry UX Owner (to be assigned)	NCIE-011 API owner	Assurance/Audit (NCIE-008)

Human Review Focus

- [INSTITUTIONAL CONFIRMATION REQUIRED] (Blocking) HR12-25-1: Confirm draft/autosave/confirmation.

Traceability: NCIE-003; NCIE-011; NCIE-008.

Case, Investigation & Workflow UX

Define case, investigation and workflow UX.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.

Upstream: NCIE-001/002; NCIE-010.

26.0 Salient Things to Note

Moving a UI card is not necessarily a governed state transition; preserve Evidence gaps, approvals and history — this chapter never lets a drag-and-drop interaction silently perform a governed transition without going through its actual approval path.

26.1 UI Movement Is Not a Governed Transition

Moving a card on a kanban-style board or changing a filter is not automatically a governed workflow-state transition — the underlying state change follows its own NCIE-008/010 governed process, and the UI reflects that process rather than driving it directly by drag-and-drop alone.

26.2 Preserve Gaps, Approvals and History

Case overview, timeline, tasks, assignment, Evidence, status, approvals, comments and escalation each preserve Evidence gaps and historical state rather than presenting a simplified, gap-free narrative. Workflow interaction metaphors are a Human Review decision.

26.R RACI / Control Ownership

Table 33. Chapter 26 RACI / control ownership.

Function	Accountable (NCIE-008)	Responsible (UX)	Consulted	Informed
Approve workflow interaction metaphors	Accountable Authority Class (to be assigned)	Case/Workflow UX Owner (to be assigned)	NCIE-010 provenance owner	Assurance/Audit (NCIE-008)

Human Review Focus

- [INSTITUTIONAL CONFIRMATION REQUIRED] (Non-Blocking) HR12-26-1: Confirm workflow interaction metaphors; does not block the underlying governed-transition discipline already defined in the interim.

Traceability: NCIE-001/002; NCIE-010.

Collaboration, Rooms & Shared Context UX

Define Rooms and collaboration UX.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.
Upstream: NCIE-005 Rooms; NCIE-006; NCIE-007.

27.0 Salient Things to Note

Shared visibility does not expand authorization; Agent participation remains identifiable; Room Context stays bounded — this chapter's Room membership never itself grants access beyond a participant's own existing authorization.

27.1 Shared Visibility Does Not Expand Authorization

Participants, presence, shared artifacts, mentions and comments are visible to Room members per their own current authorization — being in a Room never grants access to an artifact a participant could not otherwise see.

27.2 Agent Participation Stays Identifiable, Context Stays Bounded

Any Agent participating in a Room is identifiable as an Agent (Chapter 14's non-human treatment applies), and Room Context indicators show that Context remains bounded to the Room (NCIE-006) rather than silently leaking elsewhere. Presence/participant visibility rules are a Human Review decision.

27.R RACI / Control Ownership

Table 34. Chapter 27 RACI / control ownership.

Function	Accountable (NCIE-008)	Responsible (UX)	Consulted	Informed
Approve presence/participant visibility rules	Accountable Authority Class (to be assigned)	Collaboration UX Owner (to be assigned)	NCIE-006 Memory/Context owner	Assurance/Audit (NCIE-008)

Human Review Focus

- [INSTITUTIONAL CONFIRMATION REQUIRED] (Blocking) HR12-27-1: Confirm presence/participant visibility.
- Traceability: NCIE-005 Rooms; NCIE-006; NCIE-007.

Personalization, Preferences & Saved Views

Define safe personalization for theme, density, layout, notifications and ARGUS preferences.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.
Upstream: NCIE-005; NCIE-006 Preference Memory.

28.0 Salient Things to Note

PERSONALIZATION ≠ AUTHORIZATION CHANGE; preferences cannot alter Evidence/security/governance semantics — this chapter's preference store is architecturally separate from any authorization or classification data.

28.1 Personalization Is Not Authorization Change

PERSONALIZATION ≠ AUTHORIZATION CHANGE. Theme, density, layout, saved filters/views, notification preferences and ARGUS preferences are stored as NCIE-006 Preference Memory and never alter what the user is authorized to see or do.

28.2 Reset and Scope

Every personalization has a reset-to-default path; personalization scope (what may be personalized, and whether it is per-user or per-role) is a Human Review decision.

28.R RACI / Control Ownership

Table 35. Chapter 28 RACI / control ownership.

Function	Accountable (NCIE-008)	Responsible (UX)	Consulted	Informed
Approve personalization scope	Accountable Authority Class (to be assigned)	Personalization UX Owner (to be assigned)	NCIE-006 Preference Memory owner	Assurance/Audit (NCIE-008)

Human Review Focus

- [INSTITUTIONAL CONFIRMATION REQUIRED] (Non-Blocking) HR12-28-1: Confirm personalization scope; does not block the reset-to-default path already defined in the interim.

Traceability: NCIE-005; NCIE-006 Preference Memory.

Accessibility & Inclusive Design

Define accessibility across interaction modes.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.

Upstream: NCIE-002 Ch.30; NCIE-005 Ch.32.

29.0 Salient Things to Note

ACCESSIBILITY ≠ OPTIONAL ENHANCEMENT; COLOUR ≠ SOLE STATE INDICATOR — Table 36 fixes concrete keyboard, focus, semantic and non-colour requirements for every major component/pattern class so accessibility is a build-time requirement, not a later audit finding.

29.1 Accessibility Is Not Optional

ACCESSIBILITY ≠ OPTIONAL ENHANCEMENT, and COLOUR ≠ SOLE STATE INDICATOR. Keyboard operability, focus management, semantic structure, screen-reader support, sufficient contrast, non-colour state cues, zoom/reflow support, captions and reduced-motion options are baseline requirements for every component and pattern in this document, not an optional add-on layer.

29.2 Target Standard

A specific accessibility conformance level (e.g., a named WCAG level) is not invented here — the target standard/level is a Human Review decision, and every component in Chapters 7-8 is designed to be compatible with whichever level is approved.

29.3 Accessibility Matrix (directive item 64)

The matrix below maps component/pattern classes to their accessibility requirements.

Table 36. Accessibility Matrix.

Component/Pattern Class	Keyboard	Focus	Semantic	Non-Colour Cue	Screen Reader	Caption/Reduced Motion
Inputs/forms (Ch.25)	Full tab/arrow operability	Visible focus indicator	Labeled form controls	Error icon + text, not colour alone	Field label/error announced	N/A
Buttons/menus/dialogs (Ch.8)	Full keyboard operability, Esc to close	Focus trap in modal dialogs	Role/state exposed (button, menu, dialog)	State shown with icon/text	Role and state announced	N/A
Data tables/grids (Ch.9)	Cell/row keyboard navigation	Visible focus per cell	Row/column headers associated	Sort/filter state shown with icon, not colour alone	Table structure announced	N/A
Charts/maps (Ch.10)	Keyboard-navigable data points where feasible	Visible focus on interactive elements	Text alternative/summary provided	Pattern/shape plus colour for series distinction	Text alternative announced	N/A
Notifications/alerts (Ch.22)	Keyboard-dismissable	Focus moves to	Role='alert' or equivalent	Icon + text for severity,	Announced on	N/A

	e	alert on high-severity		not colour alone	appearanc e	
Voice/multimodal (Ch.13)	Full keyboard alternative to voice actions	N/A	Transcript structure exposed	N/A	Transcript available to screen reader	Captions provided; reduced-motion respected for any animated indicator

29.R RACI / Control Ownership

Table 37. Chapter 29 RACI / control ownership.

Function	Accountable (NCIE-008)	Responsible (UX)	Consulted	Informed
Approve target accessibility standard/level	Accountable Authority Class (to be assigned)	Accessibility Owner (to be assigned)	Reviewer	Assurance/Audit (NCIE-008)

Human Review Focus

- [LEGAL/POLICY CONFIRMATION REQUIRED] (Blocking) HR12-29-1: Confirm target accessibility standard/level.
- Traceability: NCIE-002 Ch.30; NCIE-005 Ch.32.

Localization, Language & Formatting

Define localization-ready UX.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.

Upstream: NCIE-003 temporal; NCIE-005 language/voice.

30.0 Salient Things to Note

Locale changes must not change semantics, Evidence meaning, dates/times or governance states — this chapter's formatting layer never touches the underlying value it displays, only its textual/numeric representation.

30.1 Locale Never Changes Semantics

Language resources, date/time, number, currency, unit, timezone and terminology formatting adapt to locale; none of this changes Evidence meaning, the underlying temporal value (NCIE-003), or governance/security states — a translated label is still the same governed state.

30.2 Text Expansion

Layouts accommodate text-length expansion across languages without truncating critical warnings or state labels. Supported languages/locales are a Human Review decision.

30.R RACI / Control Ownership

Table 38. Chapter 30 RACI / control ownership.

Function	Accountable (NCIE-008)	Responsible (UX)	Consulted	Informed
Approve supported languages/locales	Accountable Authority Class (to be assigned)	Localization Owner (to be assigned)	NCIE-005 language owner	Assurance/Audit (NCIE-008)

Human Review Focus

- [INSTITUTIONAL CONFIRMATION REQUIRED] (Blocking) HR12-30-1: Confirm languages/locales.

Traceability: NCIE-003 temporal; NCIE-005 language/voice.

UX Performance, Responsiveness & Interaction NFRs

Define UX-level performance and responsiveness requirements conceptually.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.

Upstream: NCIE-002 Ch.30; NCIE-005 Ch.32; NCIE-011 async.

31.0 Salient Things to Note

Perceived performance must not imply completion before authoritative state exists or bypass governance/security — this chapter's optimistic-UI patterns are always reconciled against the real async state (Chapter 23), never left unreconciled for the sake of a snappier feel.

31.1 Perceived Performance Is Not Completion

A fast-appearing interface (optimistic UI, skeleton loaders, streaming/progressive display) must not imply an action completed before its authoritative state actually exists, and must never be used to bypass a governance/security check for the sake of perceived speed.

31.2 Long Tasks and Degradation

Long-running tasks and degraded conditions are surfaced honestly (Chapter 23-24) rather than masked by progressive display alone. Measurable UX targets (load time, interaction latency) are a Human Review decision; no numeric target is invented here.

31.R RACI / Control Ownership

Table 39. Chapter 31 RACI / control ownership.

Function	Accountable (NCIE-008)	Responsible (UX)	Consulted	Informed
Approve measurable UX performance targets	Accountable Authority Class (to be assigned)	UX Performance Owner (to be assigned)	NCIE-004 engineering owner	Assurance/Audit (NCIE-008)

Human Review Focus

- [ENGINEERING/INFRASTRUCTURE DISCOVERY REQUIRED] (Blocking) HR12-31-1: Confirm measurable UX targets.

Traceability: NCIE-002 Ch.30; NCIE-005 Ch.32; NCIE-011 async.

UX Analytics, Feedback & Usability Evaluation

Define UX measurement and research practices.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.

Upstream: NCIE-009 privacy/logging; NCIE-008.

32.0 Salient Things to Note

Analytics must respect privacy and cannot become surveillance by default; telemetry does not prove intent/acceptance — this chapter never treats a logged interaction as evidence a user understood or accepted a warning's content.

32.1 Analytics Is Not Surveillance

Usability metrics, feedback, task-success/friction measurement and research respect NCIE-009 privacy and logging constraints and cannot become surveillance by default — collection is purpose-limited and disclosed, consistent with notice/consent expectations.

32.2 Telemetry Does Not Prove Intent

Telemetry (e.g., a click or a dwell time) does not prove user intent or acceptance of a risk/warning — WARNING DISMISSED ≠ RISK ACCEPTED applies here too. Analytics/research governance specifics are a Human Review decision.

32.R RACI / Control Ownership

Table 40. Chapter 32 RACI / control ownership.

Function	Accountable (NCIE-008)	Responsible (UX)	Consulted	Informed
Approve analytics/research governance	Accountable Authority Class (to be assigned)	UX Analytics Owner (to be assigned)	NCIE-009 privacy owner	Assurance/Audit (NCIE-008)

Human Review Focus

- [SECURITY/SOVEREIGNTY CONFIRMATION REQUIRED] (Blocking) HR12-32-1: Confirm analytics/research governance.

Traceability: NCIE-009 privacy/logging; NCIE-008.

Design System Governance & Change Control

Define component/pattern/token lifecycle governance.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.

Upstream: NCIE-008; NCIE-004.

33.0 Salient Things to Note

DESIGN TOKEN ≠ BUSINESS RULE; design changes cannot silently alter security/governance semantics — this chapter's change-control process requires an accessibility and semantic-impact review before any token change ships, not only a visual review.

33.1 Tokens Never Encode Business Rules

DESIGN TOKEN ≠ BUSINESS RULE. Contribution, review, versioning, deprecation, ownership, documentation, accessibility review and release notes govern how the Design System evolves — a design change (e.g., a colour token update) cannot silently alter a security or governance semantic that happens to use that token.

33.2 Approval Authority

Design-system approval/change authority — who may approve a new component, deprecate an old one, or change a token — is a Human Review decision.

33.R RACI / Control Ownership

Table 41. Chapter 33 RACI / control ownership.

Function	Accountable (NCIE-008)	Responsible (UX)	Consulted	Informed
Approve design-system approval/change authority	Accountable Authority Class (to be assigned)	Design System Governance Owner (to be assigned)	NCIE-004 engineering owner	Assurance/Audit (NCIE-008)

Human Review Focus

- [INSTITUTIONAL CONFIRMATION REQUIRED] (Blocking) HR12-33-1: Confirm design-system approval authority.

Traceability: NCIE-008; NCIE-004.

Prototyping, User Validation & Design Acceptance

Define wireframe/prototype/usability-session lifecycle before implementation.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.

Upstream: NCIE-002 proposed representative-user confirmation; NCIE-008 acceptance governance.

34.0 Salient Things to Note

Prototype approval is not production acceptance; representative-user validation must preserve unresolved governance/security decisions — this chapter's design-acceptance gate never marks a Human Review item closed merely because a prototype tested well.

34.1 Prototype Approval Is Not Production Acceptance

Wireframes, prototypes, usability sessions, role-coverage testing, findings and iteration precede implementation. Design acceptance at the prototype stage is not production acceptance — it validates the design intent, not the built system's behavior (Chapter 35 covers that separately).

34.2 Preserving Unresolved Decisions

Representative-user validation must preserve, not paper over, unresolved governance/security decisions surfaced during design — a usability finding does not resolve a Human Review item from an earlier chapter. Design-validation participants and acceptance authority are a Human Review decision.

34.R RACI / Control Ownership

Table 42. Chapter 34 RACI / control ownership.

Function	Accountable (NCIE-008)	Responsible (UX)	Consulted	Informed
Approve design-validation participants/acceptance authority	Accountable Authority Class (to be assigned)	Prototyping/Validation Owner (to be assigned)	Persona/Workspace Owner (Ch.3)	Assurance/Audit (NCIE-008)

Human Review Focus

- [INSTITUTIONAL CONFIRMATION REQUIRED] (Blocking) HR12-34-1: Confirm design-validation participants and acceptance authority.

Traceability: NCIE-002 proposed representative-user confirmation; NCIE-008 acceptance governance.

UX Testing, Accessibility Verification & Acceptance

Define UX/accessibility test classes without duplicating NCIE-016.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.

Upstream: NCIE-002/005 NFRs; NCIE-009 security; NCIE-016 downstream.

35.0 Salient Things to Note

TEST SPECIFIED ≠ TEST EXECUTED; visual approval alone is insufficient for accessibility, authorization-state and failure-path UX — Table 43 specifies eight test classes and every status field is marked to prevent specification from being mistaken for execution or user validation.

35.1 Test Classes

Eight test classes are specified: usability, accessibility, keyboard/screen-reader, responsive, security-state, async/error, voice, and regression.

Table 43. UX/accessibility test-class specification.

Test ID	Test Class	Verifies	Status
UX-T1	Usability Test	Ch.2-3, 34: representative users complete key tasks per persona without undue friction	TEST SPECIFIED
UX-T2	Accessibility Test	Ch.29 Table 36: components meet the approved conformance level	TEST SPECIFIED
UX-T3	Keyboard/Screen-Reader Test	Ch.29: full keyboard operability and correct screen-reader announcement for every interactive pattern	TEST SPECIFIED
UX-T4	Responsive Test	Ch.6: critical governance/security states survive reflow at every supported form factor	TEST SPECIFIED
UX-T5	Security-State Test	Ch.17-19 Table 21: security states render correctly without policy leakage	TEST SPECIFIED
UX-T6	Async/Error Test	Ch.23-24 Table 29: every async/error state renders distinctly with no misleading collapse	TEST SPECIFIED
UX-T7	Voice Test	Ch.13: voice/multimodal states and privacy indicators behave correctly	TEST SPECIFIED
UX-T8	Regression Test	All chapters: a design-system or component change does not	TEST SPECIFIED

reintroduce a previously corrected defect

35.2 Test-Status Integrity

Specifying a test is not executing it (TEST SPECIFIED ≠ TEST EXECUTED). Visual approval alone is insufficient for accessibility, authorization-state and failure-path UX — these require their own dedicated verification. For every test above: IMPLEMENTATION EVIDENCE AVAILABLE = NO; TEST EXECUTED = NO; TEST PASSED = N/A; REPRESENTATIVE-USER VALIDATION = PENDING; HUMAN/PRODUCTION ACCEPTANCE = PENDING. Detailed test-case authoring and execution are downstream in NCIE-016.

35.R RACI / Control Ownership

Table 44. Chapter 35 RACI / control ownership.

Function	Accountable (NCIE-008)	Responsible (UX)	Consulted	Informed
Approve test acceptance authority/representative-user coverage	Accountable Authority Class (to be assigned)	UX Test Owner (to be assigned)	Assurance/Audit (NCIE-008, independent per Ch.6 SoD)	NCIE-016 downstream owner

Human Review Focus

- [INSTITUTIONAL CONFIRMATION REQUIRED] (Blocking) HR12-35-1: Confirm test acceptance authority and representative-user coverage.

Traceability: NCIE-002/005 NFRs; NCIE-009 security; NCIE-016 downstream.

Human Review Register & Open UX Decisions

Consolidate every unresolved UX/design decision exposed across Chapters 1-35 and Chapter 37 into one register: deduplicated, consistently classified, each stating precisely what it blocks. No item here manufactures closure of a decision the approved upstream chain, the approved NCIE-008/009/011 governance, security and integration layers, or the approved NCIE-012 Skeletal v0.1 does not itself settle.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.

Upstream: NCIE-008/009/011 Human Review registers, plus UX/design-specific unresolved items from Chapters 1-35.

36.0 Salient Things to Note

Deduplicate identical upstream questions; create HR12 items only for distinct UX/design decisions; blocking scope must be precise.

36.1 Purpose

This register exists so that no unresolved UX decision is silently settled by expansion prose, and so that no chapter's own Human Review Focus item is left outside the register it is meant to feed — a defect found and corrected in the companion NCIE-008 v1.0 document's initial build. Every item from Chapters 1-35 below was extracted programmatically from that chapter's own Human Review Focus section (§36.4). Chapter 36's own item (HR12-36-1) and Chapter 37's own item (HR12-37-1) are each defined once as a fixed value and rendered identically both here and in their own chapter's Human Review Focus bullet, so neither can be omitted from the register or drift from the bullet that also states it.

36.2 Summary

Table 45. Human Review Register summary (mechanically computed).

Classification	Count
ENGINEERING/INFRASTRUCTURE DISCOVERY REQUIRED	3
INSTITUTIONAL CONFIRMATION REQUIRED	25
LEGAL/POLICY CONFIRMATION REQUIRED	1
PROPOSED DESIGN DEFAULT	1
RESOLVED BY UPSTREAM BASELINE	1
SECURITY/SOVEREIGNTY CONFIRMATION REQUIRED	6
Total	37
— Blocking	28
— Non-Blocking	9

36.3 Complete Register

Table 46. Complete Human Review Register.

Review ID	Source Chapter	Question	Classification	Blocking Scope	Upstream Cross-Reference	Status
HR12-1-1	Chapter 1	Confirm NCIE-012 acceptance/sign-off authority.	INSTITUTIONAL CONFIRMATION REQUIRED (Blocking)	Confirm NCIE-012 acceptance/sign-off authority.	NCIE-008 HR8-10-1 (acceptance/c hapter sign-off	Open

authority) — same institutional question, instantiated for NCIE-012; resolving HR8-10-1 for the NCIE-series pattern resolves this item too.

HR12-2-1	Chapter 2	Approve any institution-specific UX principles not fixed upstream; does not block the doctrine already stated above in the interim.	INSTITUTIONAL CONFIRMATION REQUIRED (Non-Blocking)	Non-blocking — does not gate chapter-level UX operation	N/A — distinct UX/design decision	Open
HR12-3-1	Chapter 3	Confirm the persona set and representative-user groups.	INSTITUTIONAL CONFIRMATION REQUIRED (Blocking)	Confirm the persona set and representative-user groups.	N/A — distinct UX/design decision	Open
HR12-4-1	Chapter 4	Approve top-level navigation and terminology.	INSTITUTIONAL CONFIRMATION REQUIRED (Blocking)	Approve top-level navigation and terminology.	N/A — distinct UX/design decision	Open
HR12-5-1	Chapter 5	Confirm default role layouts; does not block the composition primitives already defined in the interim.	INSTITUTIONAL CONFIRMATION REQUIRED (Non-Blocking)	Non-blocking — does not gate chapter-level UX operation	N/A — distinct UX/design decision	Open
HR12-6-1	Chapter 6	Confirm supported form factors.	ENGINEERING/INFRASTRUCTURE DISCOVERY REQUIRED (Blocking)	Confirm supported form factors.	N/A — distinct UX/design decision	Open
HR12-7-1	Chapter 7	Approve brand/visual identity inputs (logo, palette, typography family, icon brand, imagery style).	PROPOSED DESIGN DEFAULT (Blocking)	Approve brand/visual identity inputs (logo, palette, typography family, icon brand, imagery style).	N/A — distinct UX/design decision	Open
HR12-8-1	Chapter 8	Confirm component governance; does not block the component semantic/accessibility requirements already defined in the interim.	INSTITUTIONAL CONFIRMATION REQUIRED (Non-Blocking)	Non-blocking — does not gate chapter-level UX operation	N/A — distinct UX/design decision	Open

HR12-24-1	Chapter 24	Confirm diagnostic-detail exposure.	SECURITY/SOVEREIGNTY CONFIRMATION REQUIRED (Blocking)	Confirm diagnostic-detail exposure.	N/A — distinct UX/design decision	Open
HR12-25-1	Chapter 25	Confirm draft/autosave/confirmation.	INSTITUTIONAL CONFIRMATION REQUIRED (Blocking)	Confirm draft/autosave/confirmation.	N/A — distinct UX/design decision	Open
HR12-26-1	Chapter 26	Confirm workflow interaction metaphors; does not block the underlying governed-transition discipline already defined in the interim.	INSTITUTIONAL CONFIRMATION REQUIRED (Non-Blocking)	Non-blocking — does not gate chapter-level UX operation	N/A — distinct UX/design decision	Open
HR12-27-1	Chapter 27	Confirm presence/participant visibility.	INSTITUTIONAL CONFIRMATION REQUIRED (Blocking)	Confirm presence/participant visibility.	N/A — distinct UX/design decision	Open
HR12-28-1	Chapter 28	Confirm personalization scope; does not block the reset-to-default path already defined in the interim.	INSTITUTIONAL CONFIRMATION REQUIRED (Non-Blocking)	Non-blocking — does not gate chapter-level UX operation	N/A — distinct UX/design decision	Open
HR12-29-1	Chapter 29	Confirm target accessibility standard/level.	LEGAL/POLICY CONFIRMATION REQUIRED (Blocking)	Confirm target accessibility standard/level.	N/A — distinct UX/design decision	Open
HR12-30-1	Chapter 30	Confirm languages/locales.	INSTITUTIONAL CONFIRMATION REQUIRED (Blocking)	Confirm languages/locales.	N/A — distinct UX/design decision	Open
HR12-31-1	Chapter 31	Confirm measurable UX targets.	ENGINEERING/INFRASTRUCTURE DISCOVERY REQUIRED (Blocking)	Confirm measurable UX targets.	N/A — distinct UX/design decision	Open
HR12-32-1	Chapter 32	Confirm analytics/research governance.	SECURITY/SOVEREIGNTY CONFIRMATION REQUIRED (Blocking)	Confirm analytics/research governance.	N/A — distinct UX/design decision	Open
HR12-33-1	Chapter 33	Confirm design-system approval authority.	INSTITUTIONAL CONFIRMATION REQUIRED (Blocking)	Confirm design-system approval authority.	N/A — distinct UX/design decision	Open
HR12-34-1	Chapter 34	Confirm design-validation participants and acceptance authority.	INSTITUTIONAL CONFIRMATION REQUIRED (Blocking)	Confirm design-validation participants and acceptance authority.	N/A — distinct UX/design decision	Open
HR12-35-1	Chapter 35	Confirm test acceptance authority and representative-user	INSTITUTIONAL CONFIRMATION REQUIRED (Blocking)	Confirm test acceptance authority and representative-user	N/A — distinct UX/design decision	Open

		coverage.		coverage.		
HR12-36-1	Chapter 36	Review this consolidated register and decide, for each Blocking item, whether it must be resolved before NCIE-012 v1.0 may be approved or may instead remain open under an interim design default.	INSTITUTIONAL CONFIRMATION REQUIRED (Blocking)	Review this consolidated register and decide, for each Blocking item, whether it must be resolved before NCIE-012 v1.0 may be approved or may instead remain open under an interim design default.	N/A — distinct UX/design decision	Open
HR12-37-1	Chapter 37	Approve the NCIE-012 skeletal structure and authorize controlled full expansion — already satisfied by the approved NCIE-012 Skeletal v0.1 and the production directive that authorized this v1.0 expansion; preserved here as historical record, not a live open item.	RESOLVED BY UPSTREAM BASELINE (Non-Blocking)	Non-blocking — does not gate chapter-level UX operation	N/A — distinct UX/design decision	Resolved by upstream baseline

36.4 Mechanical Verification

35 of these 37 items were recomputed programmatically from the Human Review Focus bullet text of Chapters 1-35 rather than assembled by hand. The remaining 2 items are HR12-36-1 (this chapter's own item) and HR12-37-1 (Chapter 37's own item), each defined once and rendered identically in both this table and their own chapter's Human Review Focus bullet. 0 duplicate Review IDs; 0 orphan Human Review items — every Human Review ID appearing anywhere in this specification is reconciled into this register.

36.5 Upstream Deduplication (Directive Item 66)

One item, HR12-1-1, restates an institutional question NCIE-008 has already opened as HR8-10-1 (acceptance authorities for each NCIE-series document and chapter-level sign-off); Table 46 cross-references it rather than treating it as an independent open question, per directive item 66. No other NCIE-012 item was found to duplicate an existing NCIE-008/009/011 governance, security or integration question — each remaining item concerns a UX/design-specific decision that NCIE-008/009/011 do not themselves resolve.

36.6 Blocking Scope Discipline

Each Blocking item states exactly what it blocks — a specific brand choice, threshold, ownership assignment or acceptance authority — rather than implying the whole of NCIE-012 or the whole approved upstream chain is blocked. Non-Blocking items are explicitly proposed defaults or confirmations that do not gate the corresponding chapter's UX operation in the interim.

Human Review Focus

- [INSTITUTIONAL CONFIRMATION REQUIRED] (Blocking) HR12-36-1: Review this consolidated register and decide, for each Blocking item, whether it must be resolved before NCIE-012 v1.0 may be approved or may instead remain open under an interim design default.

Traceability: All chapters above (mechanically reconciled register); NCIE-008/009/011 Human Review registers.

Traceability, Acceptance & Downstream Handover

Close traceability to the approved NCIE-001-011 foundation and the approved NCIE-012 Skeletal v0.1; define acceptance criteria and the downstream handover to NCIE-013/015/016.

Status: IN DEVELOPMENT — FOR HUMAN REVIEW.

Upstream: Approved NCIE-001-011 foundation.

37.0 Salient Things to Note

Skeleton approval authorizes expansion only; UX approval does not prove implementation, usability acceptance or test execution — §37.4's acceptance gate states this explicitly rather than leaving it implied.

37.1 Traceability Matrix

Every chapter of this document traces to an approved upstream authority or to the approved NCIE-012 Skeletal v0.1 itself. No chapter states a UX requirement without an identifiable source.

Table 47. Full traceability matrix.

NCIE-012 Chapter	Primary Upstream Authority	Relationship
Chapter 1	NCIE-001-011 approved foundation	Mandate/UX boundary
Chapter 2	NCIE-001; NCIE-005; NCIE-008	Human-centred UX doctrine
Chapter 3	NCIE-002; NCIE-008 roles; NCIE-009 IAM	User roles/personas/workspace needs
Chapter 4	NCIE-001; NCIE-011 routes; NCIE-009	Information architecture & navigation
Chapter 5	NCIE-002; NCIE-004	Workspace shell & panel composition
Chapter 6	NCIE-004; NCIE-002 NFRs	Responsive layout & viewport adaptation
Chapter 7	NCIE-004 frontend baseline	Design System foundations
Chapter 8	NCIE-004; NCIE-011 interface states	Component library & composition rules
Chapter 9	NCIE-003; NCIE-009; NCIE-010	Data tables, grids & analytical views
Chapter 10	NCIE-001/002; NCIE-003 GIS/KPI; NCIE-010	Charts, maps & visual analytics
Chapter 11	NCIE-002; NCIE-005	ARGUS presentation modes
Chapter 12	NCIE-005; NCIE-006; NCIE-010	Conversational interaction & response structure
Chapter 13	NCIE-005 voice; NCIE-009 security	Voice, speech & multimodal interaction
Chapter 14	NCIE-007; NCIE-003 Agent objects	Agent & multi-Agent status presentation
Chapter 15	NCIE-007 Ch.21/26; NCIE-003	Gate A, Gate B & VPF state presentation
Chapter 16	NCIE-008; NCIE-005/007	Human Approval, review & governance UX
Chapter 17	NCIE-009 Ch.5 and handover	Security, authentication & step-up UX

Chapter 18	NCIE-009 Ch.8-9; NCIE-008	Privileged & break-glass UX
Chapter 19	NCIE-009; NCIE-003	Authorization, restricted & redacted states
Chapter 20	NCIE-010; NCIE-003	Evidence, provenance & audit presentation
Chapter 21	NCIE-006; NCIE-009; NCIE-010	Search, discovery & retrieval UX
Chapter 22	NCIE-001/002; NCIE-005; NCIE-011 events	Notifications, alerts & situation awareness
Chapter 23	NCIE-011 Ch.23/25; NCIE-007 Tools	Async operations, progress & outcome-unknown UX
Chapter 24	NCIE-005; NCIE-011; NCIE-009	Errors, degraded mode & recovery UX
Chapter 25	NCIE-003; NCIE-011; NCIE-008	Forms, data entry & validation
Chapter 26	NCIE-001/002; NCIE-010	Case, investigation & workflow UX
Chapter 27	NCIE-005 Rooms; NCIE-006; NCIE-007	Collaboration, Rooms & shared Context UX
Chapter 28	NCIE-005; NCIE-006 Preference Memory	Personalization, preferences & saved views
Chapter 29	NCIE-002 Ch.30; NCIE-005 Ch.32	Accessibility & inclusive design
Chapter 30	NCIE-003 temporal; NCIE-005 language/voice	Localization, language & formatting
Chapter 31	NCIE-002 Ch.30; NCIE-005 Ch.32; NCIE-011 async	UX performance, responsiveness & interaction NFRs
Chapter 32	NCIE-009 privacy/logging; NCIE-008	UX analytics, feedback & usability evaluation
Chapter 33	NCIE-008; NCIE-004	Design System governance & change control
Chapter 34	NCIE-002 proposed representative-user confirmation; NCIE-008	Prototyping, user validation & design acceptance
Chapter 35	NCIE-002/005 NFRs; NCIE-009; NCIE-016 (downstream)	UX testing, accessibility verification & acceptance
Chapter 36	All chapters above; NCIE-008/009/011 Human Review registers	Consolidated Human Review Register
Chapter 37	Approved NCIE-001-011; NCIE-012 Skeletal v0.1	Traceability/acceptance/handover

37.2 Chapter-Count and Salient-Note Mechanical Verification

A programmatic scan of this document confirms exactly 37 sequential 'NCIE-012 — Chapter N Expansion' labels, N = 1..37, each present exactly once, in order, with no gap, duplicate or unintended renaming (directive item 78). A second scan confirms an explicit '<N>.0 Salient Things to Note' heading present for all 37 chapters (directive item 79), rerun independently against this final document rather than assumed from the build script.

37.3 Skeleton-to-Full Fidelity Verification

Every approved Chapter Purpose, Salient Things to Note, Principal Component, Upstream Dependency/Authority and Human Review Focus from the approved NCIE-012 Skeletal v0.1 is substantively represented in the corresponding full chapter above (directive item 77); none is omitted, and none is conceptually inverted.

37.4 Acceptance Criteria and the Unresolved-Item Gate

Full approval of NCIE-012 v1.0 requires: (a) 37/37 chapter integrity confirmed; (b) 37/37 explicit Salient Things to Note subsections confirmed; (c) skeleton-to-full fidelity confirmed; (d) every Blocking Human Review item in Chapter 36 either resolved by an institutional decision or explicitly and knowingly deferred by the approving authority; (e) the §35.1 test suite specified with no test falsely marked executed, passed, or user-validated; and (f) three-artifact consistency (this document, the Change Register and the Verification Report) confirmed. Approval of the v0.1 skeleton authorized this expansion only — it did not itself approve any brand choice, threshold, product choice or ownership assignment proposed above. UX architecture approval under this chapter does not prove implementation, usability acceptance, accessibility conformance, security validation or test execution.

37.5 Downstream Handover Register

NCIE-012 does not preempt detailed downstream specification. The table below states what is handed over and what remains downstream.

Table 48. Downstream handover register.

Downstream Document	What NCIE-012 Hands Over
NCIE-013 (domain-module business logic)	UX patterns for domain workflows (Ch.9-10, 26) for functional-module business rules; no domain interpretation is specified here.
NCIE-015 (operations)	UX operational responsibilities (RACI/control-ownership tables throughout) for handoff into operational runbooks; no runbook is specified here.
NCIE-016 (detailed testing)	The 8 UX/accessibility test classes specified in §35.1 (Table 43); detailed test cases, execution and representative-user validation remain downstream in NCIE-016 — this document specifies the tests, not their execution.

37.6 Readiness and Final Disposition

NCIE-012 UX/UI & Design System Specification v1.0 — Full Expansion of Approved Skeletal v0.1 — is READY FOR HUMAN REVIEW. It is NOT marked Approved. The approved v0.1 skeleton remains historically preserved as the expansion architecture; every proposed brand choice, threshold, product choice and ownership assignment deferred in Chapters 1-35 remains a proposal pending the Chapter 36 Human Review Register; every §35.1 test remains SPECIFIED, not executed or user-validated, pending NCIE-016.

Human Review Focus

- [RESOLVED BY UPSTREAM BASELINE] (Non-Blocking) HR12-37-1: Approve the NCIE-012 skeletal structure and authorize controlled full expansion — already satisfied by the approved NCIE-012 Skeletal v0.1 and the production directive that authorized this v1.0 expansion; preserved here as historical record, not a live open item.

Traceability: NCIE-001-011 approved foundation; approved NCIE-012 Skeletal v0.1.
