1. Executive Overview

The NCIE Production Documentation Suite is the controlled index for eighteen specifications covering the National Communications Intelligence Ecosystem from product requirements and architecture through governance, security, delivery, verification and production handover. Together, the suite comprises 319 chapters.

1.1 Purpose of this register

- Provide a single, readable reference for the complete documentation suite.
- Assign every specification a stable NCIE identifier for traceability.
- State the chapter count and primary purpose of each specification.
- Support controlled implementation, review, assurance and handover activities.

1.2 Using the suite

Use the NCIE document identifier when referencing requirements, decisions, controls or implementation work. Read the Master Product Requirements Document first, then use the architecture, governance, engineering, delivery and acceptance specifications as the authoritative domain references for their stated purposes.

2. Suite at a Glance

18	319	NCIE-001—018
Controlled documents	Total chapters	Identifier range

The register spans product definition, solution and data architecture, artificial intelligence and memory, governance and security, evidence and integrations, user experience, functional modules, storage, infrastructure, testing, implementation planning and final production handover.

3. Documentation Register

The following register preserves the identifiers, document titles, chapter counts and primary purposes defined in the source documentation index.

ID	Document	Chapters	Primary purpose
NCIE-001	NCIE Master Product Requirements Document (PRD)	18	Defines exactly what NCIE must do
NCIE-002	NCIE System & Solution Architecture Specification	20	Defines the overall technical architecture
NCIE-003	NCIE Technology Stack & Engineering Blueprint	17	Defines approved technologies and engineering patterns
NCIE-004	NCIE Data Architecture & Intelligence Information Model	18	Defines data, entities, relationships and lifecycle

ID	Document	Chapters	Primary purpose
NCIE-005	NCIE Intelligence Assistant Specification	22	Complete specification for the conversational AI
NCIE-006	NCIE Memory & Context Architecture Specification	16	Defines persistent per-user and institutional memory
NCIE-007	NCIE AI, Agent & Model Orchestration Specification	18	Defines AI Gateway and autonomous agent operation
NCIE-008	NCIE VPF Governance & Human Authority Specification	16	Defines applicable governance controls and boundaries
NCIE-009	NCIE Security, IAM & Zero-Trust Architecture	19	Defines authentication, authorization and security
NCIE-010	NCIE Evidence, Provenance & Audit Architecture	16	Makes intelligence traceable and defensible
NCIE-011	NCIE API, Integration & Data Connector Specification	18	Defines contracts between systems
NCIE-012	NCIE UX/UI & Design System Specification	17	Converts our visualizations into implementable UI rules
NCIE-013	NCIE Functional Modules Specification	21	Defines each major NCIE operational module
NCIE-014	NCIE Database & Storage Engineering Specification	17	Gives Codex implementation-level persistence design
NCIE-015	NCIE DevSecOps, Infrastructure & Deployment Specification	18	Defines environments, CI/CD and deployment
NCIE-016	NCIE Testing, Verification & Acceptance Specification	18	Defines when the platform is actually complete
NCIE-017	NCIE Implementation Roadmap & Codex Build Plan	16	Converts architecture into build sequence
NCIE-018	NCIE Codex Master Production Handover Package	14	Final execution contract and document index

Table 1. NCIE production documentation register.

4. Production Control Guidance

Apply the following controls when maintaining or issuing documents in this suite. These controls support traceability and do not replace formal organizational approval.

- Retain the assigned NCIE identifier throughout the document lifecycle.
- Record version, owner, review status and approval date in each controlled document.
- Reference related specifications by identifier and title, not by title alone.
- Maintain change history and approval evidence for every released revision.
- Validate accessibility, factual integrity, security classification and distribution controls before release.

4.1 Brand and editorial standard

Use the NCIE logo and its deep-green, gold, emerald and neutral palette consistently. Reserve bold type for headings, table headers, identifiers and deliberate emphasis. Body text beneath headings should remain regular weight for readability.

4.2 Source integrity

This production-ready register preserves the source catalogue of eighteen documents. The source summary stated 312 chapters; arithmetic verification of the document register produced 319 chapters, which is the total used in this edition. Operational approvals, signatures, audit evidence, residency controls and technical enforcement must be recorded by the responsible authority in the relevant controlled systems; they are not asserted by this document.
