

NCIE → Codex

Production Documentation Suite

RECONCILED CONTROLLED REGISTER — v3.0

18 documents • 608 chapters • Current evolved baseline

Document Control

Document	NCIE Production Documentation Suite
Edition	v3.0 — Reconciled controlled register
Reconciliation date	16 September 2026
Supersedes	Production-ready register dated 17 August 2026 (319-chapter catalogue)
Reconciliation basis	Current NCIE-001–017 controlled documents supplied for reconciliation plus Human-approved NCIE-018 Skeletal v0.1.
Current suite size	18 controlled document slots; 608 chapters in the current evolved baseline.
Governance status	Register reconciliation only. It does not itself resolve Human Review items, execute tests, authorize implementation, appoint personnel or establish production acceptance.

1. Executive Reconciliation Statement

The 17 August 2026 Production-Ready register is superseded as the current suite index because its titles, document allocations and chapter counts describe an earlier NCIE catalogue. Reconciliation against the evolved controlled documents shows 572 chapters across NCIE-001–017, plus 36 chapters in the Human-approved NCIE-018 skeletal architecture, for a current suite total of 608 chapters. The register is therefore updated to describe the documents that actually exist in the present controlled baseline rather than forcing those documents back into the earlier 319-chapter catalogue.

NCIE-018 is retained in this reconciled register as the Human-approved 36-chapter Operational Handover, Organizational Readiness & Governance skeletal architecture. Its full v1.0 production remains paused pending use of this reconciled register as the governing suite index and a replacement/full-expansion instruction consistent with the approved skeleton.

2. Suite at a Glance

Controlled slots	Current chapters	Full controlled baselines	Approved skeletal baseline
18	608	17	NCIE-018

3. Current Documentation Register

ID	Current controlled title	Version	Chapters	Current status	Primary purpose
----	--------------------------	---------	----------	----------------	-----------------

NCIE-001	Master PRD	v1.3	18	Human-approved baseline	Defines the master product requirements and NCIE product obligations.
NCIE-002	System Architecture & Technical Design	v0.5	32	Human-approved baseline	Defines system architecture, technical design, boundaries, handovers and implementation structure.
NCIE-003	Data Model & Data Dictionary	v0.4	43	Human-approved baseline	Defines canonical entities, identifiers, relationships, schemas, temporal semantics and data dictionary.
NCIE-004	Technology Stack & Engineering Blueprint	v1.2	36	Human-approved baseline	Defines technology-stack families, engineering patterns, runtime, delivery, observability and engineering handovers.
NCIE-005	ARGUS Intelligence Assistant Specification	v1.3	35	Human-approved baseline	Defines ARGUS conversational intelligence behavior, Human-Primary boundaries, assistance modes and degraded behavior.
NCIE-006	Memory & Context Architecture Specification	v1.2	36	Human-approved baseline	Defines User/Room/Investigation Memory, Context, retrieval, temporal and provenance boundaries.
NCIE-007	AI, Agent & Model Orchestration Specification	v1.2	36	Human-approved baseline	Defines Agent Factory/runtime, model/tool orchestration, Gate A/B, VPF interaction and bounded

					autonomy.
NCIE-008	Governance, Authority, Accountability & RACI Specification	v1.0	26	Human-approved baseline	Defines institutional governance, authority, accountability, approvals, RACI, SoD and Human Review controls.
NCIE-009	Security, IAM & Zero-Trust Architecture	v1.0	28	Human-approved baseline	Defines identity, authentication, authorization, privileged access, Zero Trust, privacy and security controls.
NCIE-010	Evidence, Provenance & Audit Architecture	v1.0	29	Human-approved baseline	Defines Evidence identity, provenance, custody, audit, integrity, contradiction and Decision-Time defensibility.
NCIE-011	API, Integration & Data Connector Specification	v1.0	32	Human-approved baseline	Defines service/API/event /connector contracts, integration semantics, retries, reconciliation and interface governance.
NCIE-012	UX/UI & Design System Specification	v1.0	37	Human-approved baseline	Defines Human-Primary UX/UI, ARGUS/Agent/VP F presentation, accessibility and Design System governance.
NCIE-013	Functional Modules Specification	v1.0	34	Human-approved baseline	Defines domain functional-module logic, analytical states, domain workflows and Human-governed interpretation.
NCIE-014	Database & Storage Engineering Specification	v1.0	34	Human-approved baseline	Defines physical persistence, indexing, replication, migration, retention,

					recovery and storage engineering.
NCIE-015	DevSecOps, Infrastructure & Deployment Specification	v1.0	36	Human-approved baseline	Defines environments, CI/CD, runtime infrastructure, deployment, observability, incident and continuity operations.
NCIE-016	Testing, Verification & Acceptance Specification	v1.0	40	Human-approved baseline	Defines the comprehensive verification programme, RTM, test evidence, acceptance and sign-off architecture.
NCIE-017	Implementation Roadmap & Build Plan	v1.0	40	Human-approved baseline	Defines WBS, dependencies, sequencing, stage gates, implementation handover and build-plan governance.
NCIE-018	Operational Handover, Organizational Readiness & Governance Specification	Skeletal v0.1	36	Human-approved skeleton; full v1.0 paused	Defines organizational capability, operational ownership, staffing/skills requirements, knowledge transfer, readiness and institutional handover governance.

4. Reconciliation Against Superseded Register

ID	Superseded title	Old ch.	Current title	Current ch.	Δ	Disposition
NCIE-001	NCIE Master Product Requirements Document (PRD)	18	Master PRD	18	+0	Title/ allocation and/or chapter architecture reconciled to current controlled

						document
NCIE-002	NCIE System & Solution Architecture Specification	20	System Architecture & Technical Design	32	+12	Title/ allocation and/or chapter architecture reconciled to current controlled document
NCIE-003	NCIE Technology Stack & Engineering Blueprint	17	Data Model & Data Dictionary	43	+26	Title/ allocation and/or chapter architecture reconciled to current controlled document
NCIE-004	NCIE Data Architecture & Intelligence Information Model	18	Technology Stack & Engineering Blueprint	36	+18	Title/ allocation and/or chapter architecture reconciled to current controlled document
NCIE-005	NCIE Intelligence Assistant Specification	22	ARGUS Intelligence Assistant Specification	35	+13	Title/ allocation and/or chapter architecture reconciled to current controlled document
NCIE-006	NCIE Memory & Context Architecture Specification	16	Memory & Context Architecture Specification	36	+20	Count/status reconciliation
NCIE-007	NCIE AI, Agent & Model Orchestration Specification	18	AI, Agent & Model Orchestration Specification	36	+18	Count/status reconciliation
NCIE-008	NCIE VPF Governance & Human Authority Specification	16	Governance, Authority, Accountability & RACI Specification	26	+10	Title/ allocation and/or chapter architecture reconciled to current controlled document
NCIE-009	NCIE Security, IAM & Zero-	19	Security, IAM & Zero-Trust	28	+9	Count/status reconciliation

	Trust Architecture		Architecture			
NCIE-010	NCIE Evidence, Provenance & Audit Architecture	16	Evidence, Provenance & Audit Architecture	29	+13	Count/status reconciliation
NCIE-011	NCIE API, Integration & Data Connector Specification	18	API, Integration & Data Connector Specification	32	+14	Count/status reconciliation
NCIE-012	NCIE UX/UI & Design System Specification	17	UX/UI & Design System Specification	37	+20	Count/status reconciliation
NCIE-013	NCIE Functional Modules Specification	21	Functional Modules Specification	34	+13	Count/status reconciliation
NCIE-014	NCIE Database & Storage Engineering Specification	17	Database & Storage Engineering Specification	34	+17	Count/status reconciliation
NCIE-015	NCIE DevSecOps, Infrastructure & Deployment Specification	18	DevSecOps, Infrastructure & Deployment Specification	36	+18	Count/status reconciliation
NCIE-016	NCIE Testing, Verification & Acceptance Specification	18	Testing, Verification & Acceptance Specification	40	+22	Count/status reconciliation
NCIE-017	NCIE Implementation Roadmap & Codex Build Plan	16	Implementation Roadmap & Build Plan	40	+24	Title/ allocation and/or chapter architecture reconciled to current controlled document
NCIE-018	NCIE Codex Master Production Handover Package	14	Operational Handover, Organizational Readiness & Governance Specification	36	+22	Material title/scope allocation superseded by evolved Human-approved skeleton

Superseded register total: 319 chapters. Current reconciled total: 608 chapters. Net change: +289 chapters.

5. Material Reconciliation Findings

- NCIE-001 retains an 18-chapter architecture; its current title is shortened to Master PRD.

- NCIE-002 expanded from the earlier 20-chapter catalogue entry to the current 32-chapter System Architecture & Technical Design.
- NCIE-003/004 underwent a material allocation evolution: the current NCIE-003 is Data Model & Data Dictionary, while NCIE-004 is Technology Stack & Engineering Blueprint. The superseded register had these subject allocations differently placed.
- NCIE-005–017 substantially expanded beyond the earlier chapter counts. Several titles were also refined during controlled reconciliation, including NCIE-013, NCIE-015, NCIE-016 and NCIE-017.
- NCIE-018 is a material scope conflict, not a wording-only correction. The superseded register's 14-chapter Codex Master Production Handover Package entry is replaced in the current register by the Human-approved 36-chapter Operational Handover, Organizational Readiness & Governance skeletal architecture.
- The earlier statement that the register 'preserves the source catalogue' is historical only and must not be used to override the evolved controlled documents.

6. Production Control Guidance

- Use this v3.0 register as the current suite index for subsequent NCIE document production and reconciliation.
- Retain stable NCIE identifiers. Any future title/scope/chapter-count change requires explicit controlled reconciliation and change history.
- Reference the current title and version shown here, not the superseded 17 August catalogue.
- Human-approved specifications remain authoritative for their substantive domains; this register indexes them and does not rewrite them.
- Human Review registers remain unresolved according to their source documents unless separately resolved by authorized Human governance.
- NCIE-016 specifies verification architecture; approval does not mean tests have executed or passed.
- NCIE-017 specifies the implementation roadmap/build plan; approval does not mean implementation has started or completed.
- NCIE-018 full expansion must use the Human-approved 36-chapter skeleton and this reconciled register, subject to a revised Claude production directive.
- Never include live credentials, secrets or private keys in production handover documentation.

7. Source Integrity & Change Control

This v3.0 reconciliation is grounded in the current NCIE-001–017 documents supplied on 16 September 2026 and the Human-approved NCIE-018 Skeletal v0.1. Where the previous register conflicts with the evolved controlled documents, this register records the current controlled state rather than treating the older catalogue as a substantive override.

Future changes must identify the affected NCIE identifier, prior title/version/chapter count, new title/version/chapter count, authority for change, substantive-scope effect, Human Review effect and effective date. Material scope changes require Human approval before downstream production.

8. Register Integrity Control

CONTROLLED SLOTS = 18

NCIE-001–017 CURRENT CHAPTERS = 572

NCIE-018 APPROVED SKELETAL CHAPTERS = 36

CURRENT SUITE TOTAL = 608

MISSING IDENTIFIERS = NONE

DUPLICATE IDENTIFIERS = NONE

NCIE | PRODUCTION DOCUMENTATION SUITE | RECONCILED CONTROLLED REGISTER v3.0

SUPERSEDED REGISTER TOTAL = 319

NET CHAPTER CHANGE = +289

This register supersedes the 17 August 2026 Production-Ready register for current suite indexing and downstream document-control reconciliation.
